EVENT RUN SHEET · OCTOBER 2026

Run the room live.

How to run the Action Hub link with a room of 200 at the 3-day AI Advantage Membership event: what to set up, what the room does, what to say at each demo, and what we measured when we tested it.

Lead	Website live · Swap with your neighbour	**Sales**	Inquiry to quotation · Payment dues
Brand	Brand kit	**Operations**	Compliance calendar, in the pack
Conversion	Swap · Own customer · Quotation · Leak · Follow-ups	**Data**	Cash flow · Number · Score · Dashboard · Speaker demos

WHO IT'S FOR

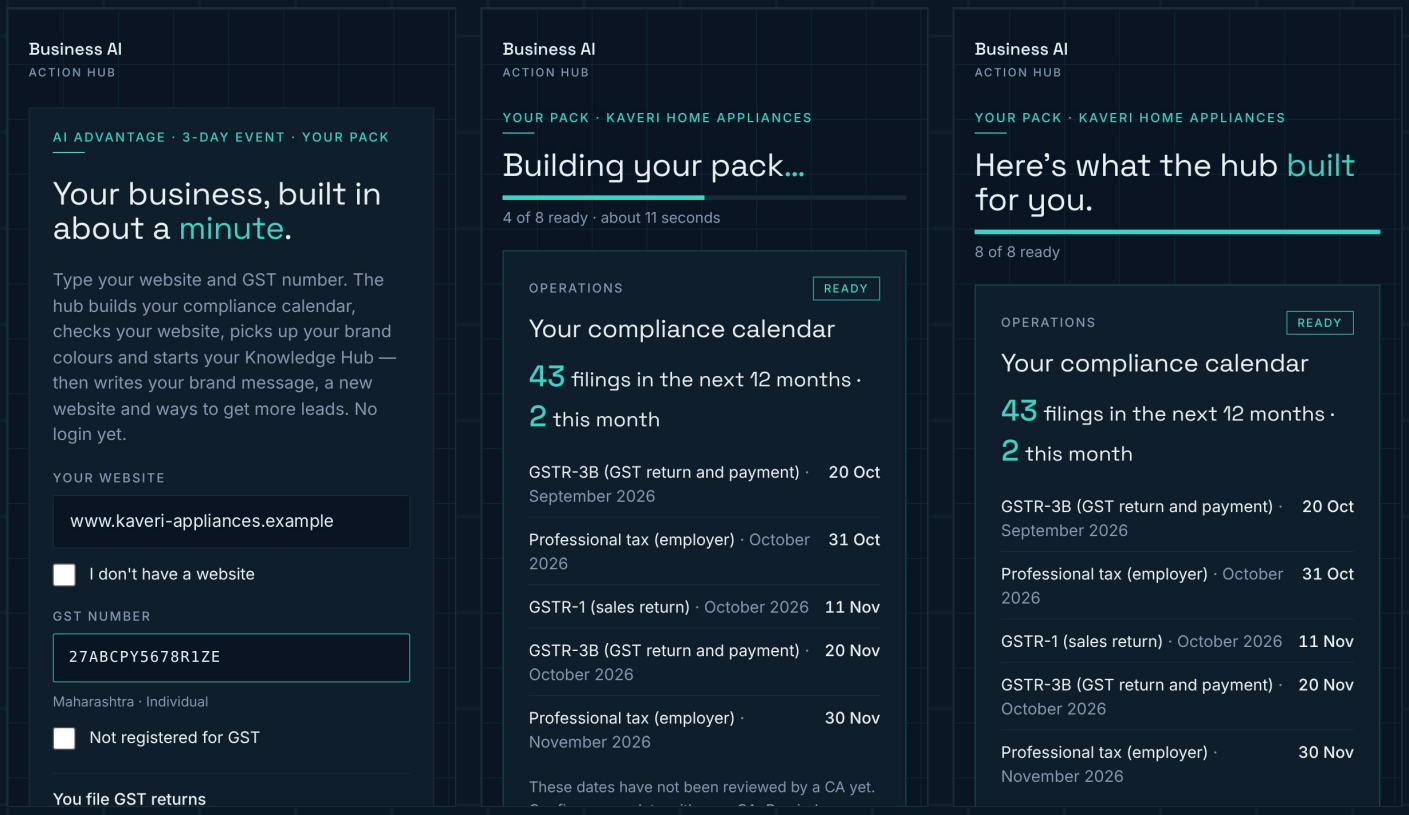

You, the speakers on stage, and the team helping people in the room.

WHERE IT STANDS

Built and tested on our machine with 200 virtual attendees on 20 and 21 Oct 2026 (v2.2). Not deployed yet. Every number says whether it was MEASURED ESTIMATE or UNTESTED.

Five steps. No login till the end.

Everyone scans one QR. Their pack is built from their own website and GST number before they sign up, so the first thing they see is their own business, not a sign-up form.

Screens from our test run, with an invented business. The website shown is an example address.

THE FIVE STEPS

1. **Scan the QR** on the screen. It opens the event page. No app, no login.
2. **Type the website and the GST number.** Two quick taps: GST filed every month or every quarter, and how many people work with them. No website? Tick *I don't have a website* and write a line about the business.
3. **Press Build my pack.** The first things show in seconds. The rest is written over the next minute or so.
4. **Press Save it to my hub.** Name, email, WhatsApp number, then the 6-digit code that comes on WhatsApp.
5. **The account is made** with everything inside. Membership features stay open till the last day of the event.

HOW LONG IT TAKES

- First things on screen: 6 s for the middle person, 95 in 100 within 12 s. MEASURED
- The whole pack: about 70 s, 95 in 100 within 101 s. MEASURED
- If everyone presses at the same moment and the AI limit is tight: first things in 18 s, the whole pack in about 5 minutes. MEASURED

THEN THE PITCH

Everything they built stays theirs. To keep using the hub with the coaching calls after the event, they take the AI Advantage Membership (₹1,999 a month).

Four things, built before they sign up.

These need no AI, so they come first and they come for everyone, even when the AI is busy.

OPERATIONS READY

Your compliance calendar

43 filings in the next 12 months · **2** this month

GSTR-3B (GST return and payment) · September 2026 — 20 Oct

Professional tax (employer) · October — 31 Oct

OPERATIONS

Compliance calendar

Every filing in the next 12 months, from the GST number's state and business type plus the two taps. Says "not reviewed by a CA yet" until the CA signs off the rules.

START

Knowledge Hub, started

Name, what they do, city, offers, contact and the business identity. Everything else in the hub is built from this.

IF THE WEBSITE CAN'T BE OPENED

The page asks for the business in a line or two and builds from that. In our test, 26 of 200 stand-in websites were broken or never answered. All 26 typed a line and got their pack. MEASURED

WHAT'S CHECKED, AND WHAT ISN'T

The GST number is only checked for its format and read for the state and business type. No GST portal is called. The website is read like a visitor would: public pages only, with size and time limits.

Then the AI writes the rest.

When AI is switched on for the event (Admin → Live event → AI before login), the pack also gets these. The Knowledge Hub is filled in from the website's text too.

IF THE AI IS BUSY

A piece that can't be written in time says *one tap in your hub after you log in.* Nothing is lost. It's one button inside the hub, and it uses 1 AI run.

WHAT IT COSTS

About ₹2 a pack in our test. ESTIMATE It's worked out from our assumed answer sizes, so check it on the speaker screen at the dry run. No attendee's AI runs are used for the pack.

One WhatsApp code, and it’s theirs.

The pack goes into an account only for the person holding it who also proves a WhatsApp number with the code. Nothing of theirs (phone, email) is kept on a pack before they save.

Save it with your WhatsApp code.

YOUR NAME

LEADS →

No inquiries yet.

SHARE YOUR WEBSITE

WHAT HAPPENS WHEN THEY SAVE

1. New number: an account is made. A number we already have: they're logged in.
2. Everything in the pack goes in: the compliance calendar, the website check, the brand starter, the Knowledge Hub and the AI pieces.
3. Nothing already in an account is overwritten. An existing business name, website or brand kit stays, and the page tells them which.
4. A team member's login never gets a pack put into the owner's hub.
5. Saved before the pack finished? The rest is added when it's ready, but only into empty fields.

WHEN THE EVENT ENDS

- Membership features close on the date you set: the event's last day.
- What they built stays. The website stays live and their business details stay.
- Quotations, Cash flow and re-checking the score need the membership from then on.

CODES

The code goes on WhatsApp first. If the number isn't on WhatsApp, it goes by SMS (once MSG91 is set up).

Set it up a week ahead.

A WEEK BEFORE

1. **Deploy**, using the deployment checklist: Railway Singapore, Atlas M10, *.employz.ai, AiSensy, MSG91, Razorpay, Amazon SES. Nothing is deployed yet.
2. **WhatsApp limit.** Check the business portfolio's tier in AiSensy or Meta Business Manager. You want 2,000 or more a day. A new one starts at 250, and 200 login codes plus alerts can come close. UNTESTED
3. **AI limit.** Check the Anthropic account's output tokens a minute. Our test ran smoothly at 400,000. At 80,000 the pack took about 5 minutes and most in-hub AI buttons said busy. MEASURED
4. **SMS backup.** The MSG91 OTP template, through DLT, so people without WhatsApp still get the code.
5. **Membership features (D1).** Admin → Live event → Move them into Membership. One click puts the guide's features, the funnel leak finder and the follow-ups in the Membership; you can undo each feature.
6. **Demo hub for the speaker demos (RS-15).** seed_demo.py on a separate demo database, the day before (its dates move with today). Never the live database: it refuses to run there.
7. **CA review** of the compliance rules. Until then every date says "not reviewed by a CA yet".

THE DAY BEFORE

1. Admin → create the cohort: code, name, dates.
2. Admin → Live event → pick it, then set:
   Packs, at most: 300 for 200 people.
   Packs with AI, at most: 300.
   Membership features open until: the last day.
   Link open: leave it off.
3. Dry run with 10 phones, iPhone and Android, end to end: scan, build, save with a real WhatsApp code, then 2 or 3 demos.
4. Do the dry run on the venue's Wi-Fi if you can.
5. Put the QR on the projector and scan it from the back row.

TELL THE ROOM A DAY BEFORE, TO BRING

- Their GST number (on the GST certificate or any invoice). Not registered? There's a box for that.
- Their website address, if they have one.
- The phone with their business WhatsApp on it.
- Rough numbers for Day 3: bank balance, rent, salaries, one amount a customer owes them, this month's sales target.

On the day, step by step.

ONE HOUR BEFORE

1. Open Admin → Live event → Live numbers on a second screen.
2. Check the Wi-Fi with 2 or 3 phones.
3. Build one pack yourself, with your own business, to check everything is live, codes included.
4. Link open stays off for now.

WHEN THE SESSION STARTS

1. Switch **Link open** on.
2. Press **Show the QR**.
3. Say: *"Scan this. Type your website and your GST number, then press Build my pack."*
4. Watch Packs started go up. If Waiting keeps growing instead of falling, ask half the room to wait a minute.
5. Keep the QR up for 3 or 4 minutes, then go to the first demo.

WHEN THE EVENT ENDS

1. Switch **Link open** off. Packs already built can still be saved.
2. Membership features close by themselves at the end of the last day.

IF SOMETHING GOES WRONG

"This event link is closed right now."
Link open is off. Switch it on in Live event.

The QR won't scan.
Live event → Copy link, and put the short link on screen.

The code isn't coming.
Check the number, then Send a new code. A number not on WhatsApp gets an SMS. Many failing? Check the WhatsApp limit.

"We couldn't open your website."
Normal for some sites. Type a line about the business and continue.

The pack is slow.
Keep talking. It finishes on its own, and they can save before it's done.

"The AI is busy right now."
No run is used. Press again in a minute, or run that demo half the room at a time.

"...as many packs as this event allows."
Raise Packs, at most in Live event.

"A pack for this GST number or website was already built."
Two packs per GST number or website. Open it on the phone they used first.

A pack failed.
Live event → Runs → Try again.

A proposed 3-day plan.

A suggestion: move things around as you like. The swap moved to Day 1 so each attendee's first follow-up is waiting for them on Day 2. On Day 3 the room's own taps use no AI.

DAY 1

Build it

LEAD BRAND OPERATIONS

1. The link: scan, build, save. Allow about 15 minutes with questions.
2. Walk through the pack: the compliance calendar and the website check.
3. Demo 1 · Website live, with the QR.
4. Demo 2 · Swap with your neighbour — in the morning, so the follow-ups are ready on Day 2.
5. Demo 5 · Brand kit.
6. Demo 8, part 1 · Take the score.

AI: the packs, and 1 run each for the brand kit.

DAY 2

Get inquiries, and close them

CONVERSION SALES LEAD

1. Demo 10 · Find your biggest leak.
2. Demo 11 · Your follow-ups, from yesterday's swap.
3. Demo 3 · Be your own customer.
4. Demo 4 · Inquiry to quotation.
5. Ways to get more leads: pick one for this week.

AI: 1 run per follow-up (the hub writes it), 1 each for demos 3 and 4.

DAY 3

Know your numbers

DATA

1. Demo 6 · Cash flow, with a what-if.
2. Demo 7 · Your daily number.
3. Speaker demos: expenses, bank statement, GST, customers, getting paid (RS-15).
4. Demo 9 · The Dashboard.
5. Demo 8, part 2 · Re-check the score.
6. The pitch, then switch the link off.

AI: none from the room's taps. The hub writes follow-up 1 for each Demo 3 inquiry (1 run each).

TIME FOR EACH DEMO

Allow 5 to 8 minutes: 1 to explain, 3 or 4 for the room, 1 or 2 to show the results on the speaker screen. This is a guess, not measured with a real room. ESTIMATE

IF THE AI LIMIT IS TIGHT

Run the brand kit and quotation demos half the room at a time: left side first, right side two minutes later. Everything else is unaffected.

01 LEAD

Website live, with the QR

NO AI TO GO LIVE

THE ROOM DOES

1. Open Menu → Website. The hub already wrote it from the pack.
2. Read it. Want a change? Type it in plain words under Edit with a prompt (1 AI run), or leave it.
3. Press Publish.
4. Press Show the QR and scan it. That's the live website, with their WhatsApp button.

YOU SAY

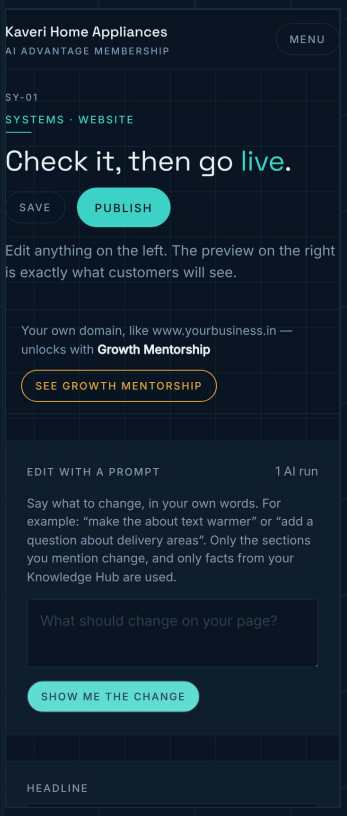

"Your website was written while you were signing up. Press Publish. It's live, right now, on your phone."

WATCH ON THE SPEAKER SCREEN

Lead → Website live

IF IT GOES WRONG

- No draft yet (it says one tap in your hub)? Press Build my website. It uses 1 AI run.
- "The AI is busy"? No run is used. Press again in a minute.

02 LEAD CONVERSION

Swap with your neighbour

NO AI

THE ROOM DOES

1. Turn to the person next to you and show them your website's QR.
2. They scan it and send you an inquiry from your website's form, the way a customer would.
3. Open Inquiries. It's there, with their name, number and message.
4. Now swap: you send one to them.

YOU SAY

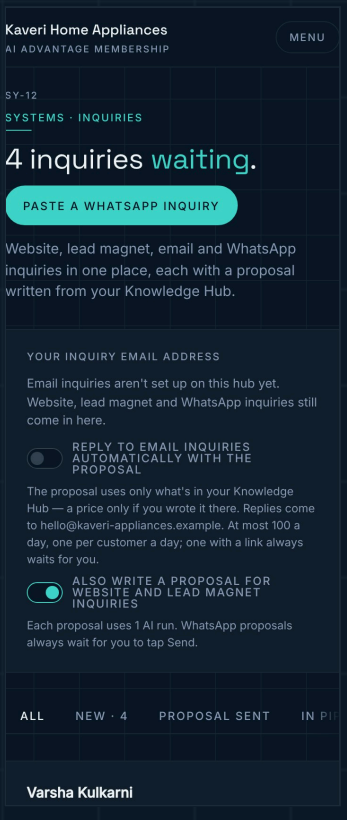

"Every form on your website lands here, with the person's number. Nothing gets lost in WhatsApp."

WATCH ON THE SPEAKER SCREEN

Conversion → Got a website inquiry

IF IT GOES WRONG

- Neighbour's website isn't live yet? Pair them with someone whose site is.
- Do it in the morning: the first follow-up is written 24 hours later, inside working hours (10am to 7pm), for Demo 11.
- The owner also gets a WhatsApp alert for each inquiry. That needs the AiSensy alert template, so check it at the dry run. UNTESTED

03 CONVERSION

Be your own customer

1 AI RUN

THE ROOM DOES

1. Type a message the way your customer would ("What's the price for...?") and copy it.
2. Inquiries → New WhatsApp inquiry (iPhone: Paste a WhatsApp inquiry) → Paste the message. Add a name and your own number.
3. Wait 10 to 20 seconds. The hub writes the reply from your Knowledge Hub.
4. Tap Send. It opens your WhatsApp with the reply typed. You decide whether to send it.

YOU SAY

"That reply only uses what's in your Knowledge Hub. No made-up prices. And nothing goes out until you tap Send."

WATCH ON THE SPEAKER SCREEN

Conversion → Sent themselves an inquiry

Reply written in 9 s for the middle person, 95 in 100 within 18 s, in both test runs. MEASURED

IF IT GOES WRONG

- Slow? It's waiting its turn and will appear on its own. Keep talking.

04 CONVERSION SALES

Inquiry to quotation

1 AI RUN

THE ROOM DOES

1. Open the inquiry from the last demo and tap Make a quotation.
2. The customer and their message are already filled in. Tap Draft the quotation.
3. Check the lines. Put in any rate that's blank.
4. Tap Save quotation, then send it on WhatsApp.

YOU SAY

"From a WhatsApp message to a GST quotation in under a minute. When they say yes, it becomes an invoice."

WATCH ON THE SPEAKER SCREEN

Conversion → Quotation from an inquiry
Sales → Quotations made

Draft in 8 s for the middle person with a generous AI limit. With a tight limit, 127 of 200 said busy. MEASURED

IF IT GOES WRONG

- "The AI is busy right now"? No run is used. Press again in a minute, or type the lines in yourself.

05 Brand kit

BRAND

1 AI RUN

One voice, one look, everywhere.

DOWNLOAD BRAND KIT PDF

THE ROOM DOES

1. Open Menu → Brand kit. The colours and logo are already there from the pack.
2. Press Write my brand kit.
3. Read the brand message in every version: one line, a 30-second pitch, who it's for.
4. Open Designs: a WhatsApp Status and posts in your colours.

YOU SAY

"One message, one look, everywhere: your WhatsApp, your posts, your website."

WATCH ON THE SPEAKER SCREEN

Brand → Brand kit written

9 s for the middle person with a generous AI limit. With a tight limit, 158 of 200 said busy. MEASURED

IF IT GOES WRONG

- Many say busy? Do it in two halves: left side of the room first, right side two minutes later.

06 Cash flow, with a what-if

DATA SALES

NO AI

A forecast from what you've entered — not your accounts.

STARTING BALANCE	LOWEST POINT	COMING IN · 30 DAYS	GOING OUT · 30 DAYS
₹2,28,000	−₹3,67,000	₹5,16,500	₹9,03,500
Bank balance on 20 Oct + ₹48,000 marked paid since	on Thu, 5 Nov	Expected, not certain	

THE ROOM DOES

1. Knowledge Hub → Money: today's bank balance, rent and salaries with their dates.
2. Money owed → add one amount a customer owes you, with the due date.
3. Open Cash flow: the next 30 days, day by day.
4. Next to that amount, press What if they pay 15 days late?

YOU SAY

"See the dip? That's the day you'd be short. You know it today, not on the day."

WATCH ON THE SPEAKER SCREEN

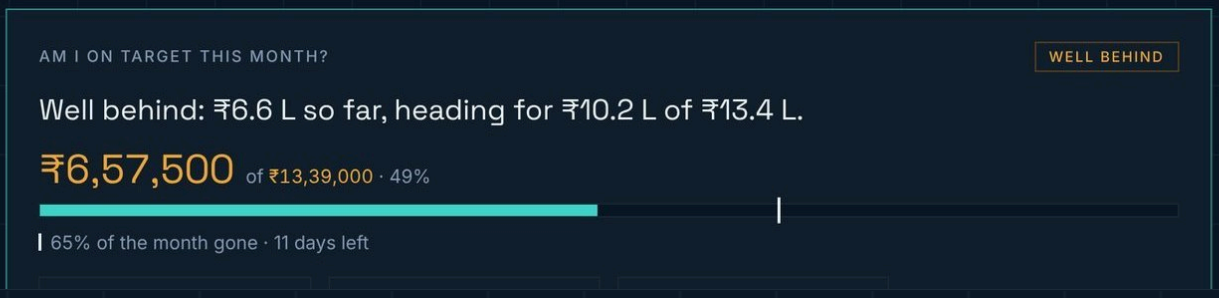

Data → Cash flow ready
Sales → Payment dues added

IF IT GOES WRONG

- No numbers handy? Rough ones are fine. They can correct them later in the Knowledge Hub.

07 DATA
Your daily number

NO AI

THE ROOM DOES

1. Knowledge Hub → Targets: this month's sales target.
2. Open Magic Number, or the Target tile on the Dashboard.
3. Read Am I on target this month? and Needed each day.

YOU SAY

"This is your number for every day that's left this month. Check it every morning."

WATCH ON THE SPEAKER SCREEN

Data → Target set

IF IT GOES WRONG

- It says No monthly target yet? The target wasn't saved. Go back to Knowledge Hub → Targets.

08 DATA
The score, on Day 1 and Day 3

NO AI

THE ROOM DOES

1. Day 1: Menu → Business score. Answer the questions honestly.
2. Press Work out my score. Note the number and the top 3 fixes.
3. Day 3: the same page. Answer again, after what you've set up in these 3 days.
4. Press Re-check my score and see the change.

YOU SAY

On Day 3: "Same questions as Day 1. Look how far you've moved in three days."

WATCH ON THE SPEAKER SCREEN

Data → Took the score (Day 1)
Data → Re-took the score (Day 3)

IF IT GOES WRONG

- After the event, re-checking the score is a Membership feature. Say so in the pitch.

09 DATA Your Dashboard

NO AI

THE ROOM DOES

1. After the cash flow and target demos, most Knowledge Hubs pass 60%.
2. Open the hub. The Dashboard is now the first screen.
3. Walk through it: today's inquiries, compliance due, the target, cash flow. One screen.

YOU SAY

"This is your business, every morning, on one screen."

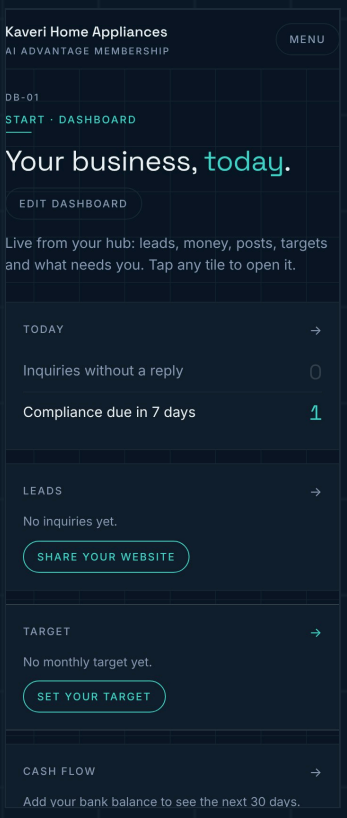

WATCH ON THE SPEAKER SCREEN

Data → Dashboard open (60%+)

All 200 test accounts passed 60% after demos 6 and 7. MEASURED

IF IT GOES WRONG

- Under 60%? The Knowledge Hub's meter shows what to add next.

10 CONVERSION Find your biggest leak

NO AI

THE ROOM DOES

1. Open Menu → Funnel leak finder (under Systems).
2. Type last month's numbers: inquiries, meetings or site visits, quotations, customers won. Don't know your website visitors? Leave it at 0.
3. Add your average sale and press Find my biggest leak.
4. Read the leak and what fixing only that step is worth. Get fixes is optional (1 AI run).

YOU SAY

"You don't need more leads first. Fix the one step where most of them slip away. That's what it's worth to you."

WATCH ON THE SPEAKER SCREEN

Conversion → Found their biggest leak

In the 200-person test all 200 found their leak; saving took under 0.1 s. MEASURED

IF IT GOES WRONG

- No leak shown? Every step is on target, or the numbers are all 0. Rough numbers are fine.
- The page shows a higher plan's lock? The Membership features weren't moved in yet (RS-05).

11 Your follow-ups

CONVERSION

1 AI RUN EACH

THE ROOM DOES

1. Open Inquiries. Yesterday's inquiry from your neighbour says Follow-up 1 of 3 is ready.
2. Read it: short, polite, from your Knowledge Hub.
3. Tap Send on WhatsApp. It opens your WhatsApp with the text typed. Or Skip this one.
4. Mark an inquiry won or lost, and its follow-ups stop.

YOU SAY

"Most sales are lost because nobody followed up. The hub writes day 1, 3 and 7 for you. You just tap Send."

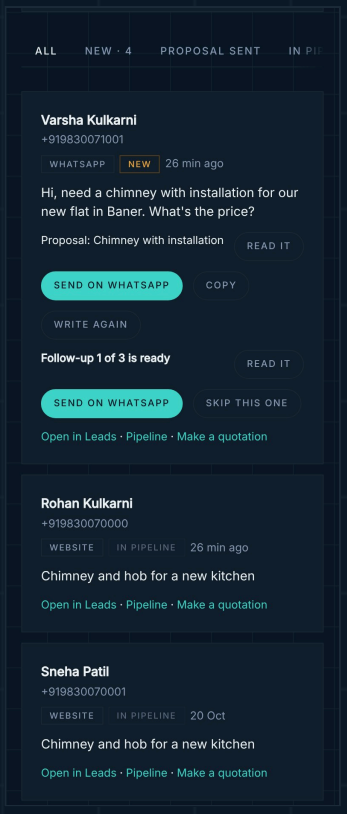

WATCH ON THE SPEAKER SCREEN

Conversion → Follow-ups ready
Conversion → Follow-ups sent

400 follow-ups falling due at the same moment were all written within 8 minutes, with a stand-in AI. MEASURED

IF IT GOES WRONG

- Nothing ready? The swap was under 24 hours ago, or after 7pm. It comes in working hours; show it at the next session.
- Switched off? Inquiries → Follow up on every inquiry. Event accounts start with it on.

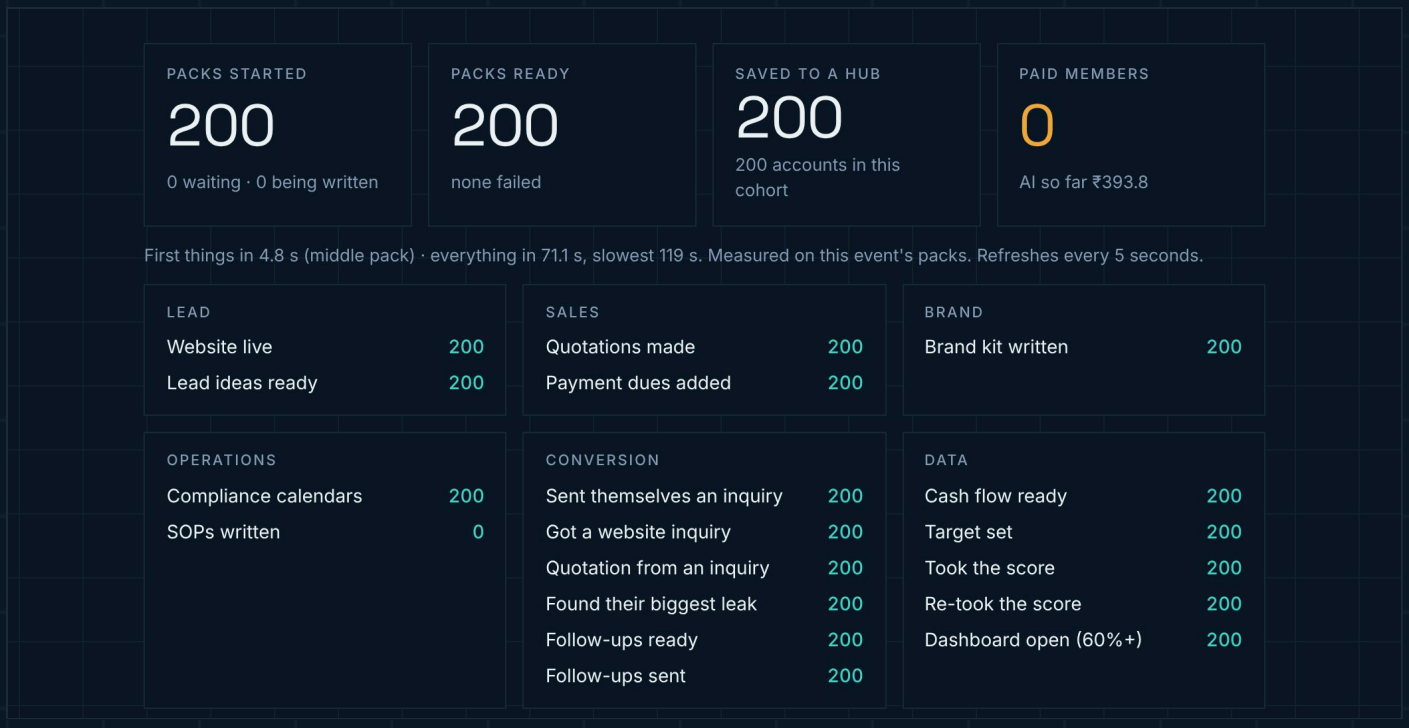

FOR EVERY AI DEMO

- The hub's AI is shared by the whole room, so a few people may see "The AI is busy right now". Their run is not used.
- Tell them to press again in a minute.
- If many see it, split the room in halves.
- Watch the demo's number on the speaker screen. When it stops climbing, most people have done it. Move on.

Know when to move on.

Admin → Live event → Live numbers. Put it on a second screen, or on the projector between demos. It refreshes every 5 seconds.

From our 200-person test at the end of the run. In a real room, the paid members number is the one that matters.

THE TOP ROW

- **Packs started**, with how many are waiting and how many are being written.
- **Packs ready**, and how many failed. A failed pack can be tried again from Runs.
- **Saved to a hub**: accounts made or logged in from this event.
- **Paid members**: who took the membership. Under it, what the packs' AI has cost so far (the hub's own count).

THE SIX BOXES

One number for each demo: how many people in the room have done it. When a number stops climbing, most people are done. Move on. Conversion also counts **Found their biggest leak**, **Follow-ups ready** and **Follow-ups sent**.

THE SPEED LINE

How fast this event's packs are: first things, everything, and the slowest one. If the first-things time climbs past 30 s, slow the room down.

Show the data features from the demo hub.

These need months of a business's own sales, bills and bank statements, so the room can't do them live. Show them from the demo hub's launch account: 9820000007, Kaveri Home Appliances, an invented business. Members do the same with their own Tally sheet and bank statement after the event.

OPEN, SHOW, SAY

DATA Expenses

Open Expenses: this month by head, against budget. Open one bill.

"Every bill, the GST you can claim back, and where the money went."

DATA Bank statement

Upload kaveri-bank-statement.csv (in the code, docs/demo). Where it went, then Repeating, then Add all to Expenses.

"Your statement, sorted in seconds. No AI reads it and the file isn't kept."

DATA GST set-aside

Open it, then How this is worked out, then Count it in my cash flow.

"About what to keep aside for GST. An estimate; confirm with your CA."

DATA Customer risk

Read the top line out, then open Gone quiet and Check in on WhatsApp.

"If this one customer stopped buying, look how much would go. And these regulars already stopped."

DATA Getting paid

Read the top line out, then the late buckets. Chase these in Money owed.

"What you ask customers for, and how long you really wait."

LEAD Competitor Watch

Add a real local competitor's website, press Check now. Open See their running ads.

"Every Monday: what your competitors changed. Only what changed."

BRAND Reviews

Paste a 2-star review. Read the draft, Approve. Paste a 5-star one: Ask for a referral.

"Every review gets a calm reply in your voice. You post it."

BEFORE YOU GO ON STAGE

1. The demo hub is seed_demo.py on its own database, run the day before: its dates move with today, so last month is always last month.
2. Open each page once on the stage laptop so nothing loads for the first time live.
3. Competitor Watch needs the venue's internet to read a real website. No internet? Show the list and the Ad Library link.
4. Every name, number and bank line in the demo hub is invented. Say so if asked.

THEN THE HIGHER PLANS

- **Win-Back** and **Content & company research** (Action Program): open them from the same account.
- **Lead Response** (Growth Mentorship): log in as 9820000006 (Sharma Modular Kitchens), fill its website form in a second browser window on the stage laptop, then open WhatsApp chats: the first reply is there, with two times.

WHAT IT USES

No AI for the data pages. Competitor Watch: 1 run only when something changed. A review reply: 1 run. All from the demo account, not the room's. MEASURED

The new demos, with 200 at once.

The same 200 virtual attendees, now also finding their leak on Day 2 and opening their follow-ups the next morning. Stand-ins played the AI engine, WhatsApp and the attendees' websites; the hub's own code, two server processes and a real database were tested.

TEST 1 · ARRIVING OVER 90 S, GENEROUS AI LIMIT, FINAL CODE MEASURED

- First things on screen: 6 s for the middle person, 95 in 100 within 12 s.
- The whole pack: 72 s, 95 in 100 within 106 s.
- 0 errors in 13,982 requests.
- Leak finder: 200 of 200 found their biggest leak; saving it took 30 ms for 95 in 100.
- Next morning, 400 follow-ups fell due at once: all written in 7.5 minutes. 200 attendees had one ready; 200 sent one.

TEST 2 · EVERYONE WITHIN 10 S, AI LIMIT 80,000 TOKENS A MINUTE MEASURED

- 197 of 200 packs built: 3 connections dropped with the test machine at 100%.
- The whole pack: 5 minutes, 7 for 95 in 100.
- Leak finder: all 197 found their leak.
- Next morning: 295 follow-ups, all written in 5.5 minutes, even with the tight AI limit.
- Fewer website inquiries to follow up (98), because 97 website drafts were left for after login.

READ IT AS

Test 2 ran on the build before the last review fixes; Test 1 on the final build. The follow-ups are written by the hub's clock every minute, so on the day they show up a few minutes after they fall due.

NOT TESTED YET UNTESTED

- The real AI engine and our account's real limit.
- Real WhatsApp for follow-ups sent from 200 phones (the tap opens the attendee's own WhatsApp).
- The bank statement reader and the data pages with 200 people at once — they're speaker demos.
- A real competitor's website from the venue's internet.

Full results: qa/loadtest/results/v22_realistic_final.json and v22_burst_tight.json.

What we tested, and what we didn't.

200 virtual attendees did the whole flow and every demo. Stand-ins played the AI engine, WhatsApp and the attendees' websites. So the hub's own code, two server processes and a real database were tested. The outside services were not.

TEST 1 · PEOPLE ARRIVING OVER 90 S, GENEROUS AI LIMIT MEASURED

- First things on screen: 6 s for the middle person, 95 in 100 within 12 s.
- The whole pack: 71 s, 95 in 100 within 101 s.
- 0 errors in 12,953 requests.
- All 200 did every demo. Every counter reached 200 (SOPs aren't a demo).
- In-hub AI (brand kit, quotation draft): about 9 s for the middle person.

TEST 2 · EVERYONE WITHIN 10 S, AI LIMIT 80,000 TOKENS A MINUTE MEASURED

- First things: 18 s for the middle person, 29 s for 95 in 100.
- The whole pack: 5 minutes, 7 minutes for 95 in 100.
- Brand messages and lead ideas reached all 200. 103 of 200 website drafts were left for after login.
- In-hub AI: 158 of 200 brand kits and 127 of 200 quotation drafts said busy (no runs used).
- Be your own customer still worked for all 200.
- The 2-core test machine hit 100%. 11 of 26,268 page checks dropped, and the page tried again.

OUR NUMBERS ESTIMATE

- AI cost: about ₹2 a pack (₹394 for 200).
- About 1,400 AI calls and 1.5 million output tokens for 200 people: the packs plus three in-hub demos, about 7 calls each.
- Both come from our assumed answer sizes.

NOT TESTED YET UNTESTED

- The real AI engine, and our account's real limit.
- Real WhatsApp codes for 200 at once (AiSensy, and Meta's daily limit). The SMS backup.
- Venue Wi-Fi with 200 phones.
- Railway and Atlas. Our test database was an older MongoDB on the same machine.
- Real phones. We used phone-sized browser windows. The dry run covers this.
- Real attendees' websites. Ours were stand-ins: most opened in under 4 s, 12 in 100 were slow, 4 never answered, 4 were broken.

The full results are in the code, under qa/loadtest/results. The AI limit decides how the room feels more than anything else we measured.

What’s still open.

WAITING ON YOU

1. **D1: where the Membership features sit.** The one-click preset is ready (Admin → Live event → Move them into Membership): the guide's features plus the funnel leak finder and follow-ups. Until then they stay in their higher plans, and demos 10 and 11 don't show.
2. **The demo hub** for the speaker demos (RS-15): seed it on its own database the day before.
3. **The CA review** of the compliance rules. Until it's done, every date says "not reviewed by a CA yet".
4. **Your call on the 3-day plan** (RS-07).
5. **Deploying.** Nothing is deployed. The deployment checklist has every step.

KNOWN LIMITS

- Saved before the pack finished? The rest is added later, but only into empty fields.
- A low AI limit means the room waits. Check it before the event.
- The test machine was small and also ran the attendees, so treat the database speed as a rough guide.
- Team member logins don't get packs. That's on purpose.
- A follow-up comes 24 hours after the inquiry when that falls between 10am and 7pm. A swap after 7pm gets it at 10am two days later, so it misses Day 2.

SAFER CHOICES WE MADE

- The pack reads only the public website and the GST number's format. No GST portal is called.
- Nothing about the attendee (phone, email) is kept on a pack until they save it.
- Nothing already in an account is overwritten.
- The link works only while you have it open, with a cap on packs and on AI.
- At most 2 packs per GST number or website per event.
- Below Growth, no WhatsApp goes to a customer without the owner's tap. E-mails go on their own only where the owner switched that on.
- On the Membership, follow-ups stay off until the owner switches them on (each is an AI run). Event accounts start with them on for Demo 11.
