FEATURE GUIDE · OCTOBER 2026

Every feature, explained.

What each part of the hub does, what it does on its own, and how to show it live in two minutes — grouped under the six areas we coach: Lead, Sales, Brand, Operations, Conversion and Data.

Lead	Getting found and getting inquiries	**Sales**	Quotations, invoices and getting paid
Brand	One message and one look, everywhere	**Operations**	Processes and compliance, written down
Conversion	Turning inquiries into customers	**Data**	Your numbers, on one screen

WHO IT'S FOR

Business owners on the AI Advantage Membership, the speakers who demo it, and the team that supports members.

THE SCREENS

Taken from the launch demo account (Kaveri Home Appliances, an invented business). Your numbers will be your own.

Six areas, one hub.

Each page that follows is one feature: what it does, how it works, what it does without you, and three steps to show it on stage. Features sit under the area where the owner feels the result.

Start here	Knowledge Hub — fill it once; everything is built from it
Lead	Website, edited by typing what should change Lead magnets — a free guide or your own PDF Ways to get more leads Social media: plan, post, mark as posted
Sales	Quotations and invoices — and invoices from Razorpay payments Automatic payment follow-ups
Brand	Brand kit: your message, your colours and fonts, ready designs (Hindi too)
Operations	SOP Writer — one SOP or every process in the business Compliance calendar — every filing and renewal, with reminders
Conversion	Inquiries inbox with an automatic proposal Sales pipeline — the 5 stages of a sale
Data	Dashboard — the whole business on one screen Am I on target this month? Cash flow for the next 30 days

AI RUNS

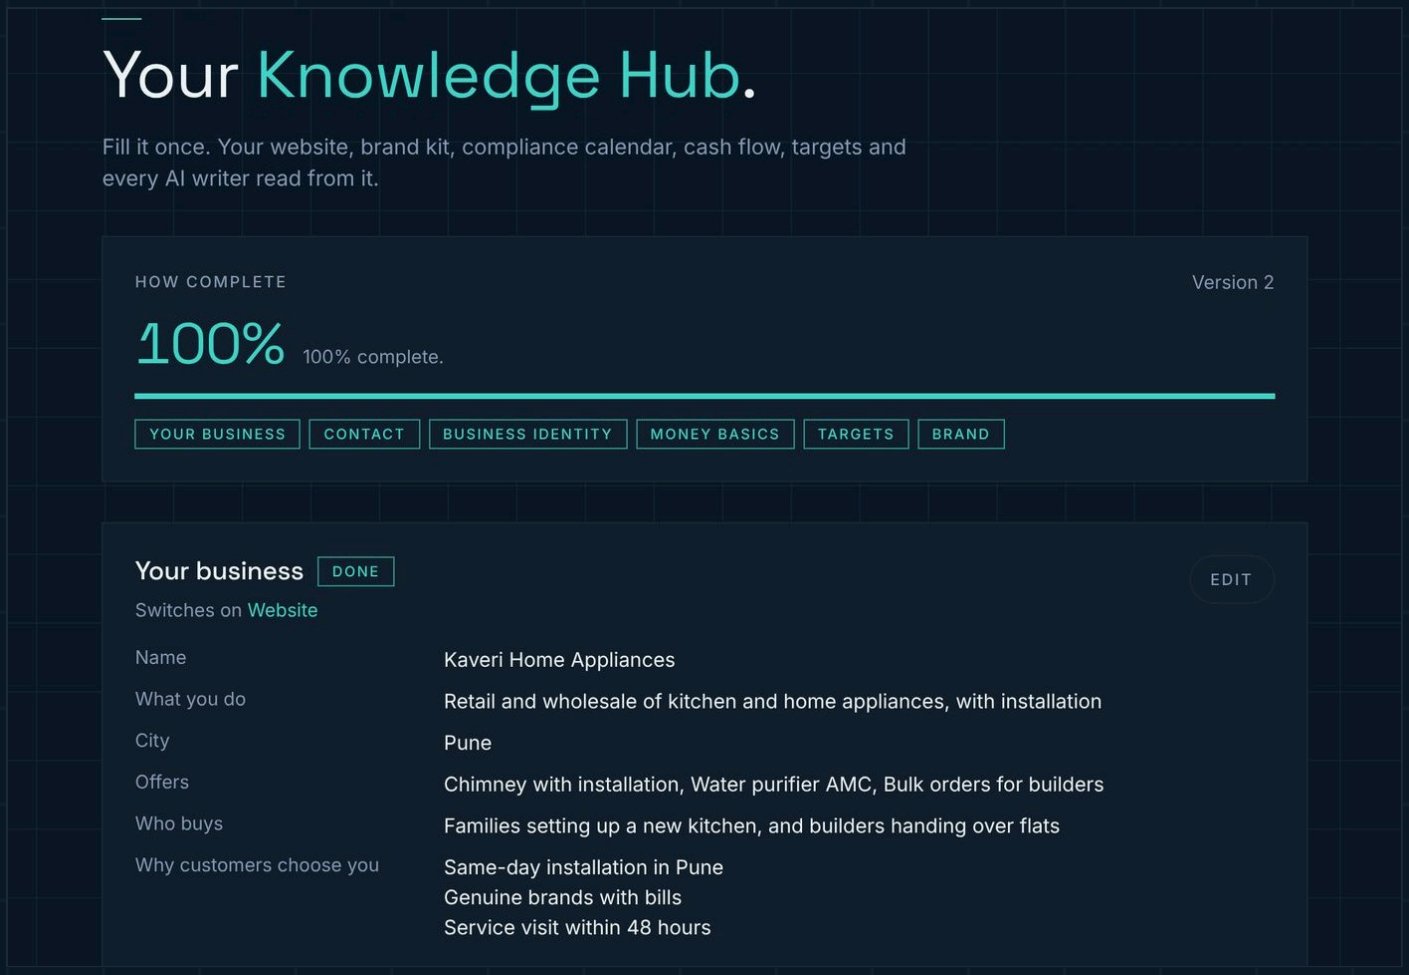

Anything the AI writes uses one run. The membership has 150 runs a month. If a draft fails or breaks a rule, the run is given back.

NOTHING GOES OUT BEHIND YOUR BACK

The hub's own WhatsApp number only ever messages you, the owner. Anything that goes to a customer on its own needs you to switch it on once, after you've read the exact wording.

Fill it once. Everything else is built from it.

The Knowledge Hub is the Business Brain: what you sell and at what price, who buys, your GST and staff details, your bank balance and fixed costs, and your monthly target.

HOW IT WORKS

1. Fill in five parts: Basics, Contact, Identity (company type, GST, state, staff, licences), Money (bank balance, fixed costs, payment terms, GST rate) and Targets.
2. A meter shows how complete it is and what the next field switches on — e.g. "add your bank balance to switch on Cash flow".
3. Change anything later. The website, brand kit, compliance calendar and SOP map update from it.

SHOW IT LIVE

1. Open the Knowledge Hub and show the meter at 40%.
2. Add the GST number, state and staff count — the meter moves and the compliance calendar appears.
3. Change the phone number and open the website: the WhatsApp button already has the new number.

WHAT RUNS ON ITS OWN

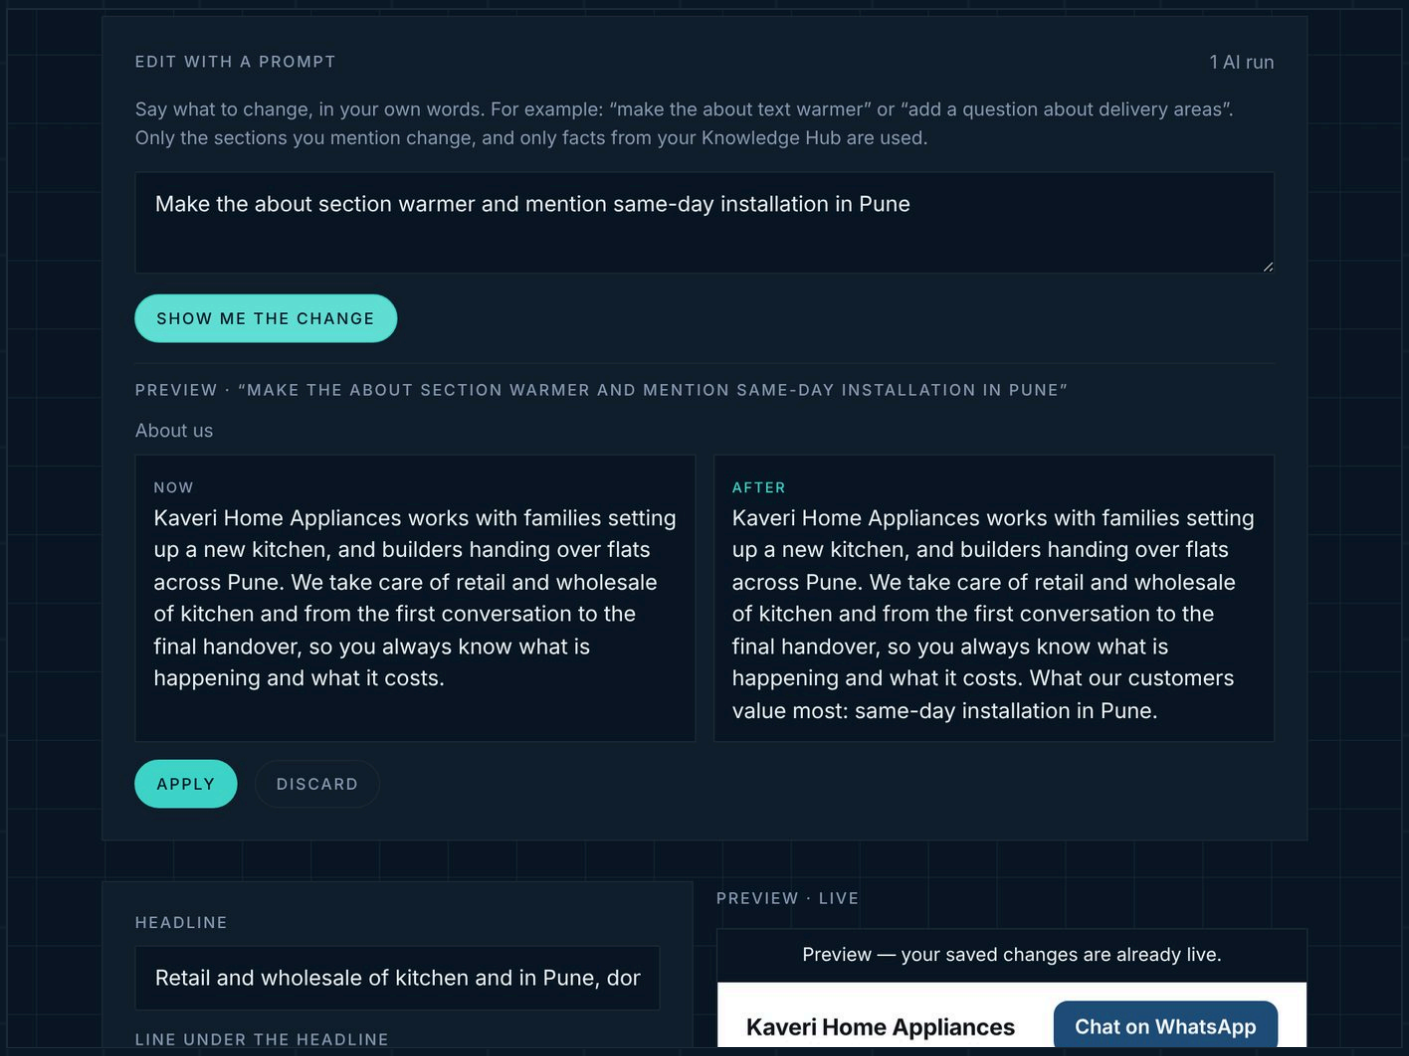

- When the Hub changes, everything built from it is refreshed.
- If you edited something yourself (your headline, say), your version is kept and a banner asks: refresh it, or keep mine?
- A new phone number shows on your website at once, with no AI run.

GOOD TO KNOW

- Once it is 60% complete, the Dashboard becomes the first screen after login.
- Every AI writer in the hub reads it, so prices and facts come only from here.
- The bank balance carries its date; after 7 days the hub asks for a fresh one.

Change your website by typing what should change.

Every owner gets a website at name.employz.ai, written from the Knowledge Hub, with an inquiry form and a Chat on WhatsApp button. Now you can edit it in plain words.

HOW IT WORKS

1. Type what should change: "make the about section warmer and mention same-day installation".
2. The hub shows only the sections that change — before and after, side by side.
3. Press Apply, or Discard. After Apply, Undo puts those sections back.

WHAT RUNS ON ITS OWN

- Nothing goes live until you press Apply.
- A fact you mention that isn't in the Knowledge Hub ("we've done 500 kitchens") is not added to the page — the hub asks to add it to your Knowledge Hub first.
- Inquiries from the form land in Leads, with a WhatsApp alert to you.

SHOW IT LIVE

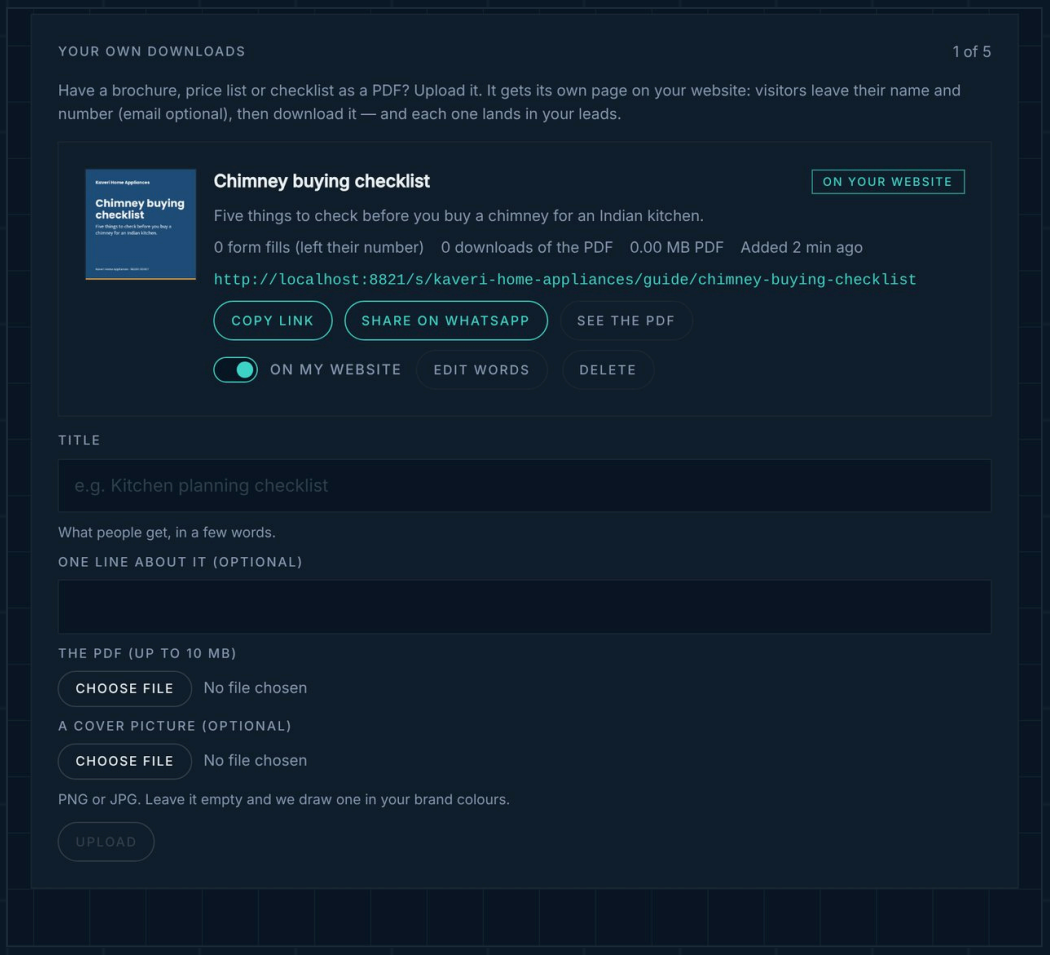

1. Open the website and read the headline aloud.
2. Type a change in the prompt box and press Show me the change.
3. Apply it, open the live page, then press Undo.

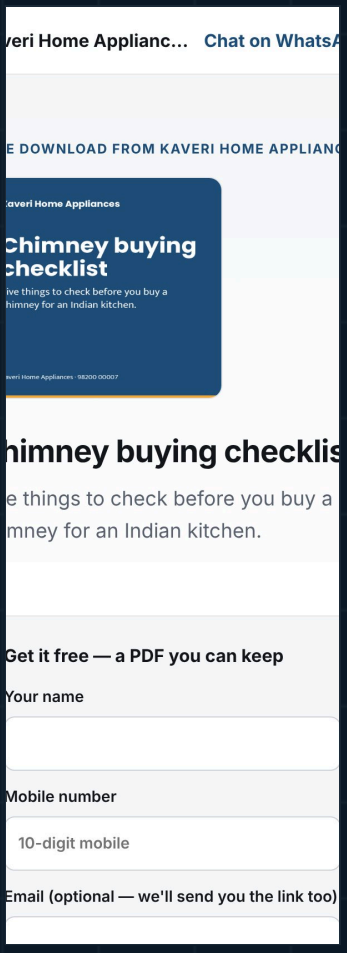

GOOD TO KNOW

- Each prompt edit uses 1 AI run.
- The prompt changes words, not the layout. "Move the button higher" gets a note saying so.
- A number the AI made up is left out, and the preview says so.

A free download that brings in leads.

A lead magnet is something useful a visitor gets for leaving their number — a checklist, a price guide, a brochure. The hub writes one for you, or you upload your own PDFs.

HOW IT WORKS

1. Let the AI write a guide from your Knowledge Hub, or upload up to 5 PDFs (10 MB each) with a title and a line about each.
2. Each one gets its own page on your website, with a cover drawn in your brand colours if you don't upload one.
3. Share the link on WhatsApp Status, in groups or on your Google profile.

SHOW IT LIVE

1. Upload a PDF price list on stage.
2. Open its page on a phone, fill the form, get the PDF.
3. Show the new lead arriving in Leads and on the Dashboard.

WHAT RUNS ON ITS OWN

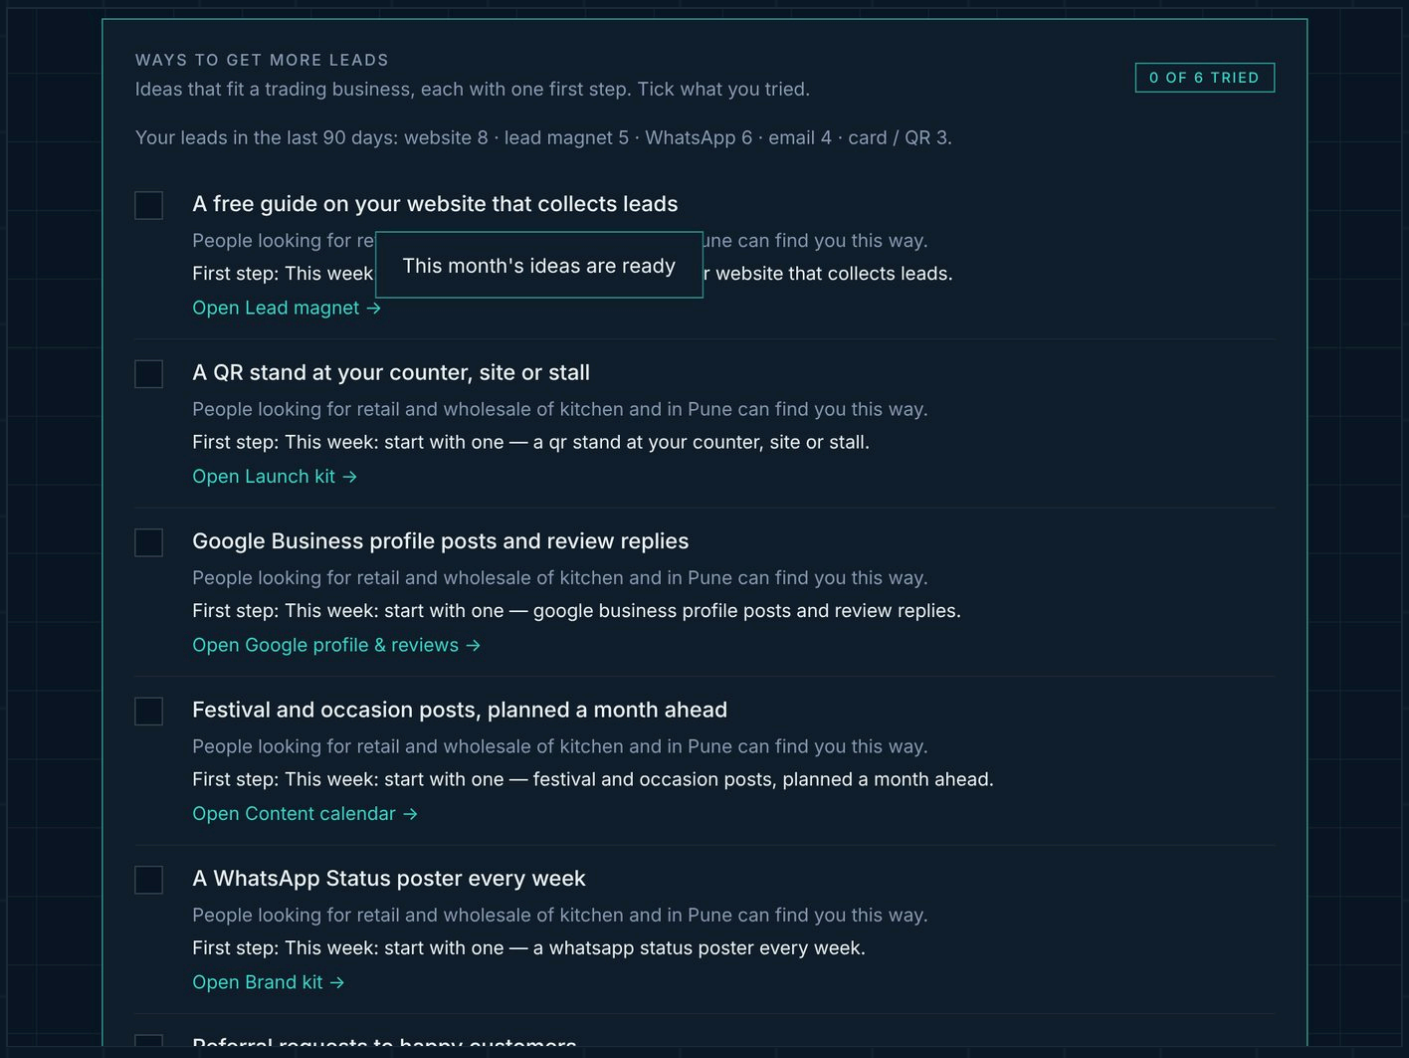

- The visitor fills name and mobile (email optional) — only then does the download link appear, and it's emailed too.
- Every download becomes a lead with the source "Lead magnet", and you get a WhatsApp alert.
- Form fills and actual downloads are counted separately.

GOOD TO KNOW

- The download link works for 7 days and only for that visitor.
- Without the form, the PDF can't be opened — not even with a guessed link.
- With the Employz.ai CRM connected, these leads sync there too.

Small growth on three levers compounds.

Revenue = customers × average sale × how often they buy. Growing each by 10% gives ×1.331 — 33.1% more revenue, not 30%. The hub shows it in your own rupees, then suggests ways to get the extra leads.

HOW IT WORKS

1. Type last year's customers, average sale and times a customer buys.
2. See the result lever by lever: what each 10% adds in rupees.
3. Press Suggest ideas: 5 to 7 ways to get more leads that fit your type of business, each with a first step for this week.

SHOW IT LIVE

1. Type 100 customers, ₹10,000 average sale, 2 purchases a year.
2. Show ₹20 L becoming ₹26.62 L — and the 33.1%.
3. Press Suggest ideas and open one idea's feature.

WHAT RUNS ON ITS OWN

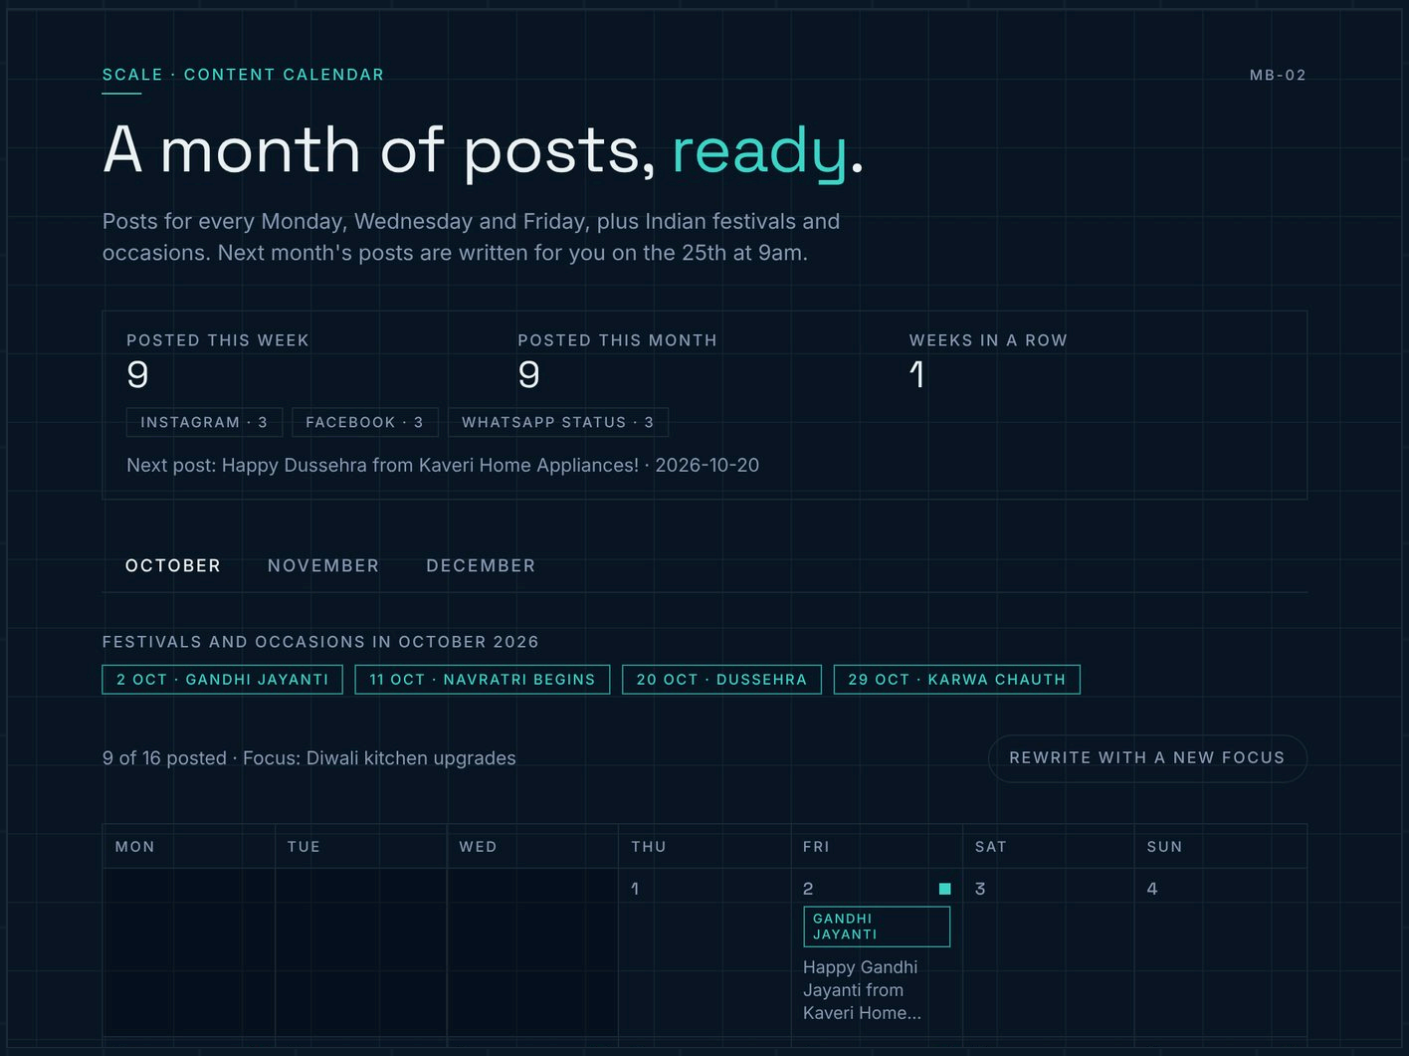

- Ideas are saved month by month; tick what you tried.
- Each idea links to the hub feature that does it — lead magnet, QR stand, Google profile, content calendar, referral requests.
- Ideas that don't fit the business (food-delivery apps for a factory, say) are never suggested.

GOOD TO KNOW

- Suggest ideas uses 1 AI run.
- The ideas use your city, offers and where your leads came from in the last 90 days.
- The maths is done by the hub, not the AI.

Plan the posts, then mark what you posted.

The content calendar writes a month of posts around Indian festivals and occasions. Now every post — calendar, weekly plan or Content Agent — has Mark as posted and Make the design.

HOW IT WORKS

1. Write the month's calendar (or let it write itself on the 25th).
2. When a post goes out, press Mark as posted and pick where: Instagram, Facebook, LinkedIn, WhatsApp Status or Google; add the link if you like.
3. Make the design opens the brand kit with the caption already in a post template.

WHAT RUNS ON ITS OWN

- A posting log counts posts this week and this month, by platform, and how many weeks in a row you've posted.
- The Dashboard's Social tile updates at once.
- A post is counted once, however many times it's marked.

SHOW IT LIVE

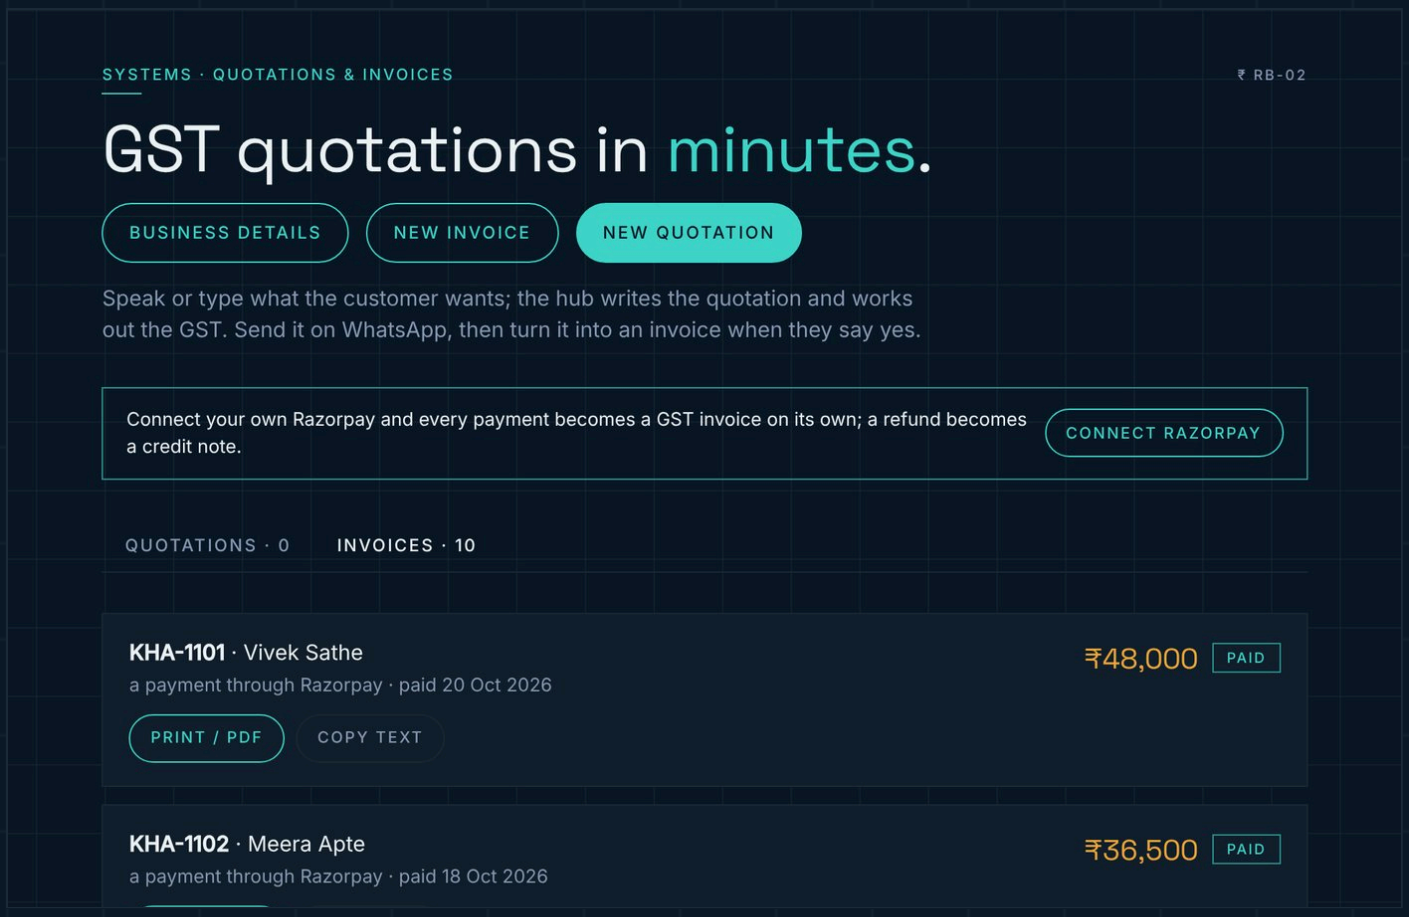

1. Open the calendar and show the festival posts.
2. Mark today's post as posted on Instagram.
3. Open the Dashboard: Social shows 1 more. Then press Make the design.

GOOD TO KNOW

- Marking is a tick — the hub doesn't post for you.
- Rewriting a month keeps the posts you already marked as posted.
- Designs use no AI run.

Invoices from a sentence — or from every payment.

GST quotations and invoices were already here. Now you can raise an invoice without a quotation, type it as a sentence, and connect your own Razorpay so every payment becomes an invoice by itself.

HOW IT WORKS

1. New invoice: customer, items, GST and a due date — or type "Sold 40 boxes to Mehta Traders, ₹850 each, 18% GST, due in 30 days" and confirm the draft.
2. Connect your own Razorpay account (key id, key secret, webhook secret) in Connections.
3. Every payment becomes a GST invoice marked paid; a refund becomes a credit note.

SHOW IT LIVE

1. Type the billing sentence and make the invoice.
2. Show the CGST + SGST split, then change the customer's state to see IGST.
3. Open Print / PDF.

WHAT RUNS ON ITS OWN

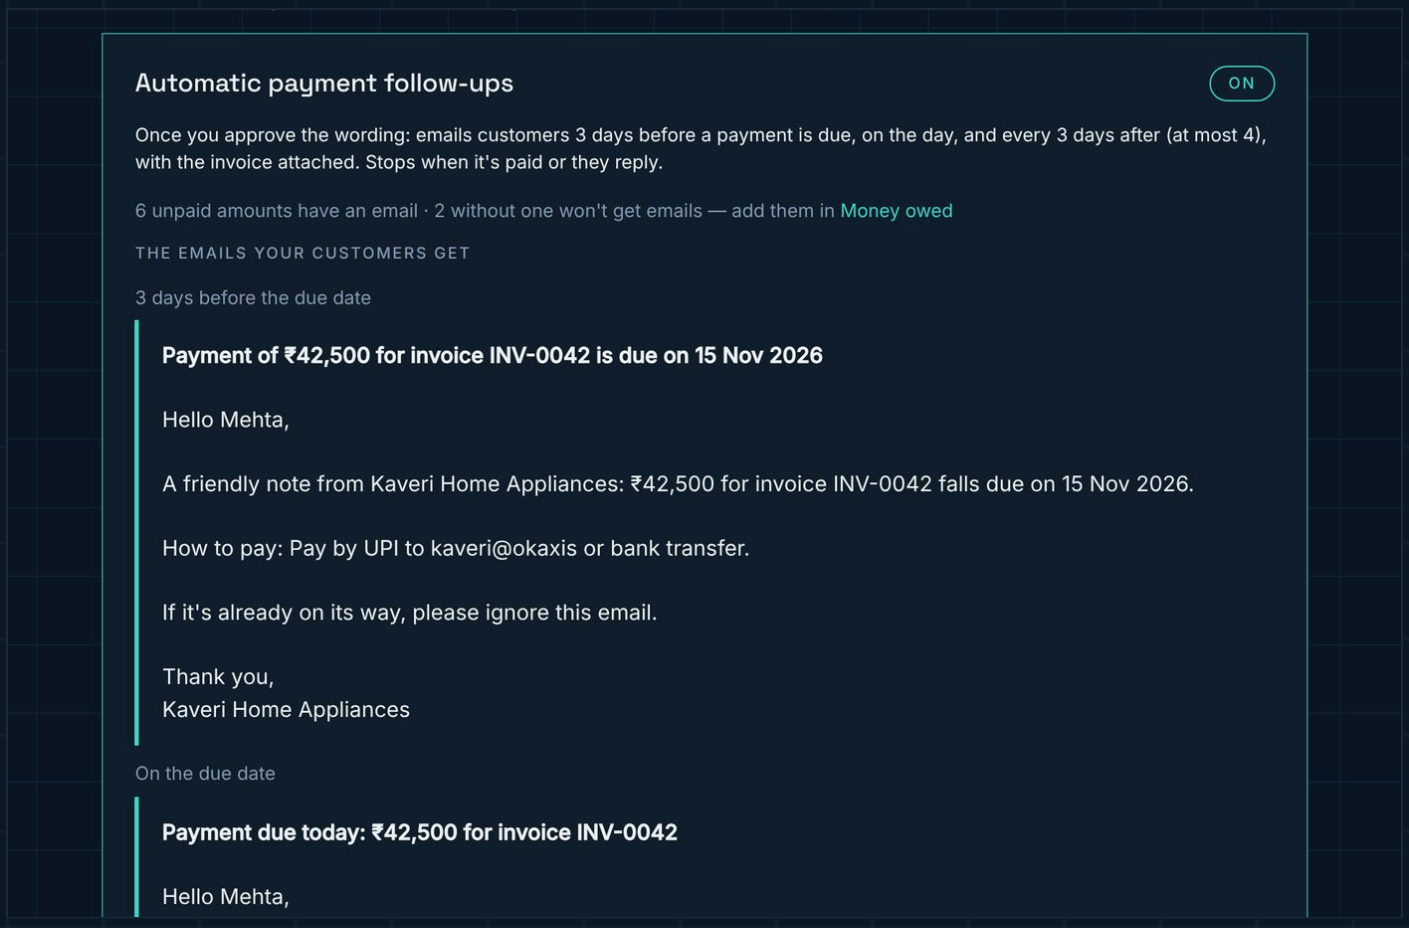

- A payment carrying an invoice number settles that due instead of making a second invoice.
- A smaller payment counts as a part payment — the due stays open for the rest.
- With "Email invoices automatically" on, customers with an email get the invoice PDF.

GOOD TO KNOW

- Same state: CGST + SGST. Another state: IGST — worked out from the customer's state or GSTIN.
- Until your business identity (GST, state) is filled in, invoices carry no GST lines.
- A rate the payer types into Razorpay is ignored; the Knowledge Hub's rate is used. The billing sentence uses 1 AI run.

Approve the wording once. The reminders run.

Money owed already showed what's overdue. Now the hub can email every customer who owes you — before the due date, on the day, and after — once you've read and approved the wording.

HOW IT WORKS

1. Open Automations and read the four sample emails: 3 days before, on the due date, overdue, and the final one.
2. Switch on. From then on, every unpaid amount with an email gets them, with the invoice PDF attached when there is one.
3. See each amount's history: what went, when, and whether the customer replied.

SHOW IT LIVE

1. Add a due with a customer's email, 3 days out.
2. Show the four samples and switch on.
3. Mark it paid — and show that nothing more goes to that customer.

WHAT RUNS ON ITS OWN

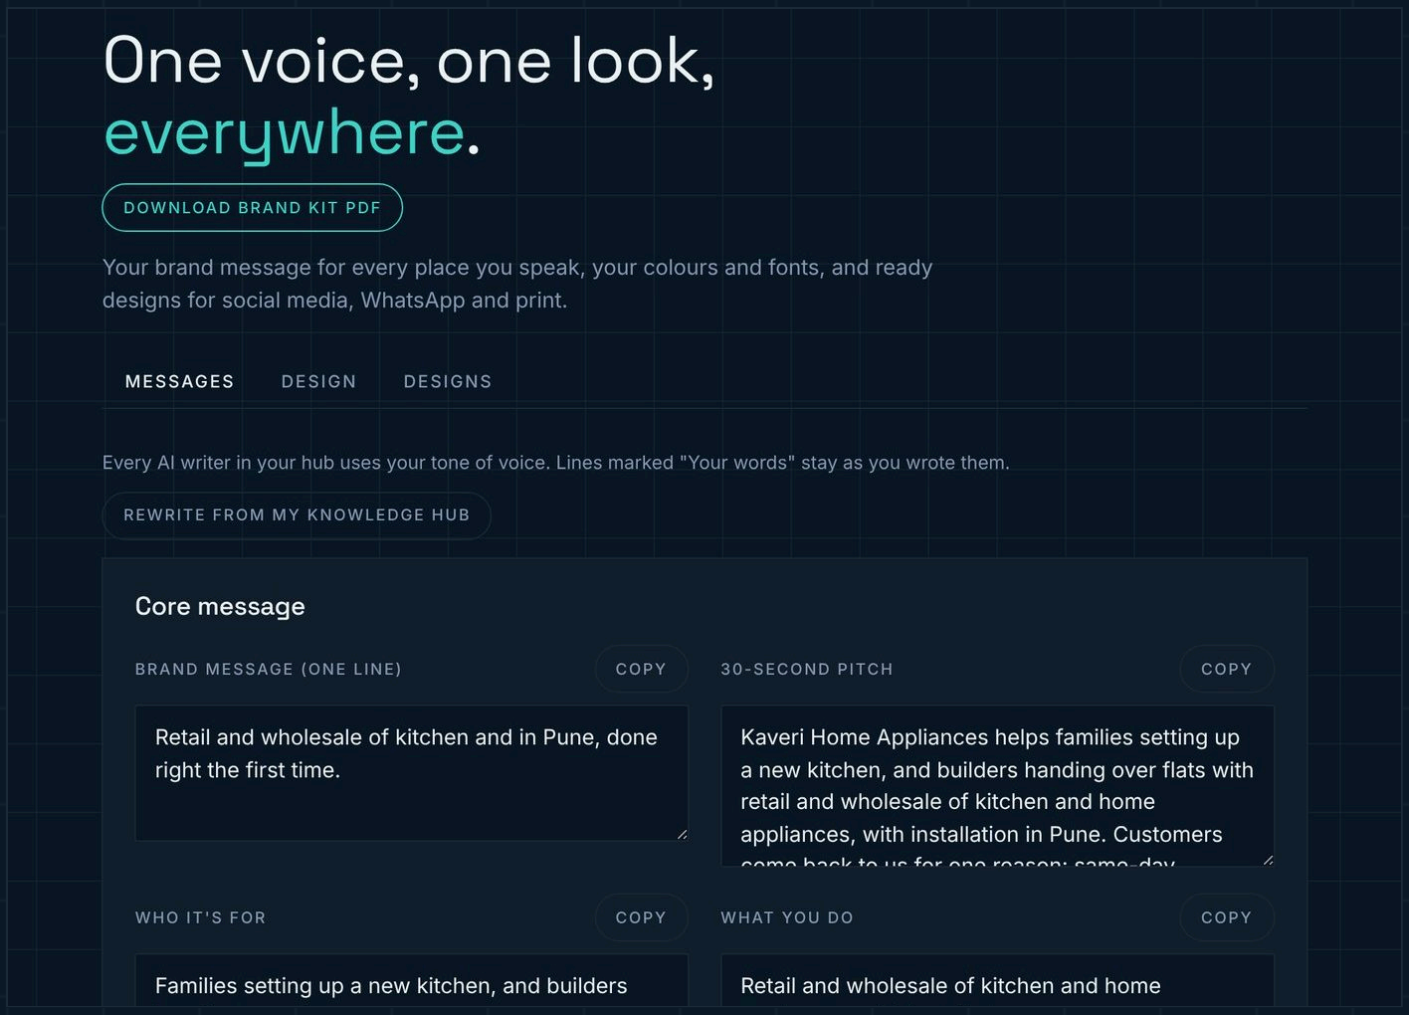

- After the due date: one email every 3 days, at most 4. The last one asks for a date to pay.
- It stops when the amount is marked paid, a payment matches it, or the customer replies.
- A morning line tells you: "Reminders sent this week: 12 · ₹1.8 L collected after a reminder".

GOOD TO KNOW

- Off until you switch it on. Exclude any customer with "Don't chase automatically".
- If your business name or how-to-pay note changes, it pauses until you approve the new wording.
- WhatsApp reminders wait in your Send list for a tap; only from Growth Mentorship can they go from your own number.

One message. One look. Everywhere.

The brand kit writes your message system from the Knowledge Hub — the one line, the 30-second pitch, website, ad, sales and social versions, and a tone of voice — and keeps your colours and fonts in one place.

HOW IT WORKS

1. Press Write my brand kit: core message, pitch, positioning and proof; website headline and buttons; ad headlines; WhatsApp intro and email signature; bios; caption hooks; tone of voice.
2. Edit any line. Lines you edit are marked "Your words" and are never overwritten.
3. Set colours (from your logo, your website, or picked), fonts, corners and spacing.

SHOW IT LIVE

1. Write the kit and read the one-line message.
2. Upload a logo: the hub suggests colours from it, with a contrast check.
3. Save and open the website — it's in the new colour.

WHAT RUNS ON ITS OWN

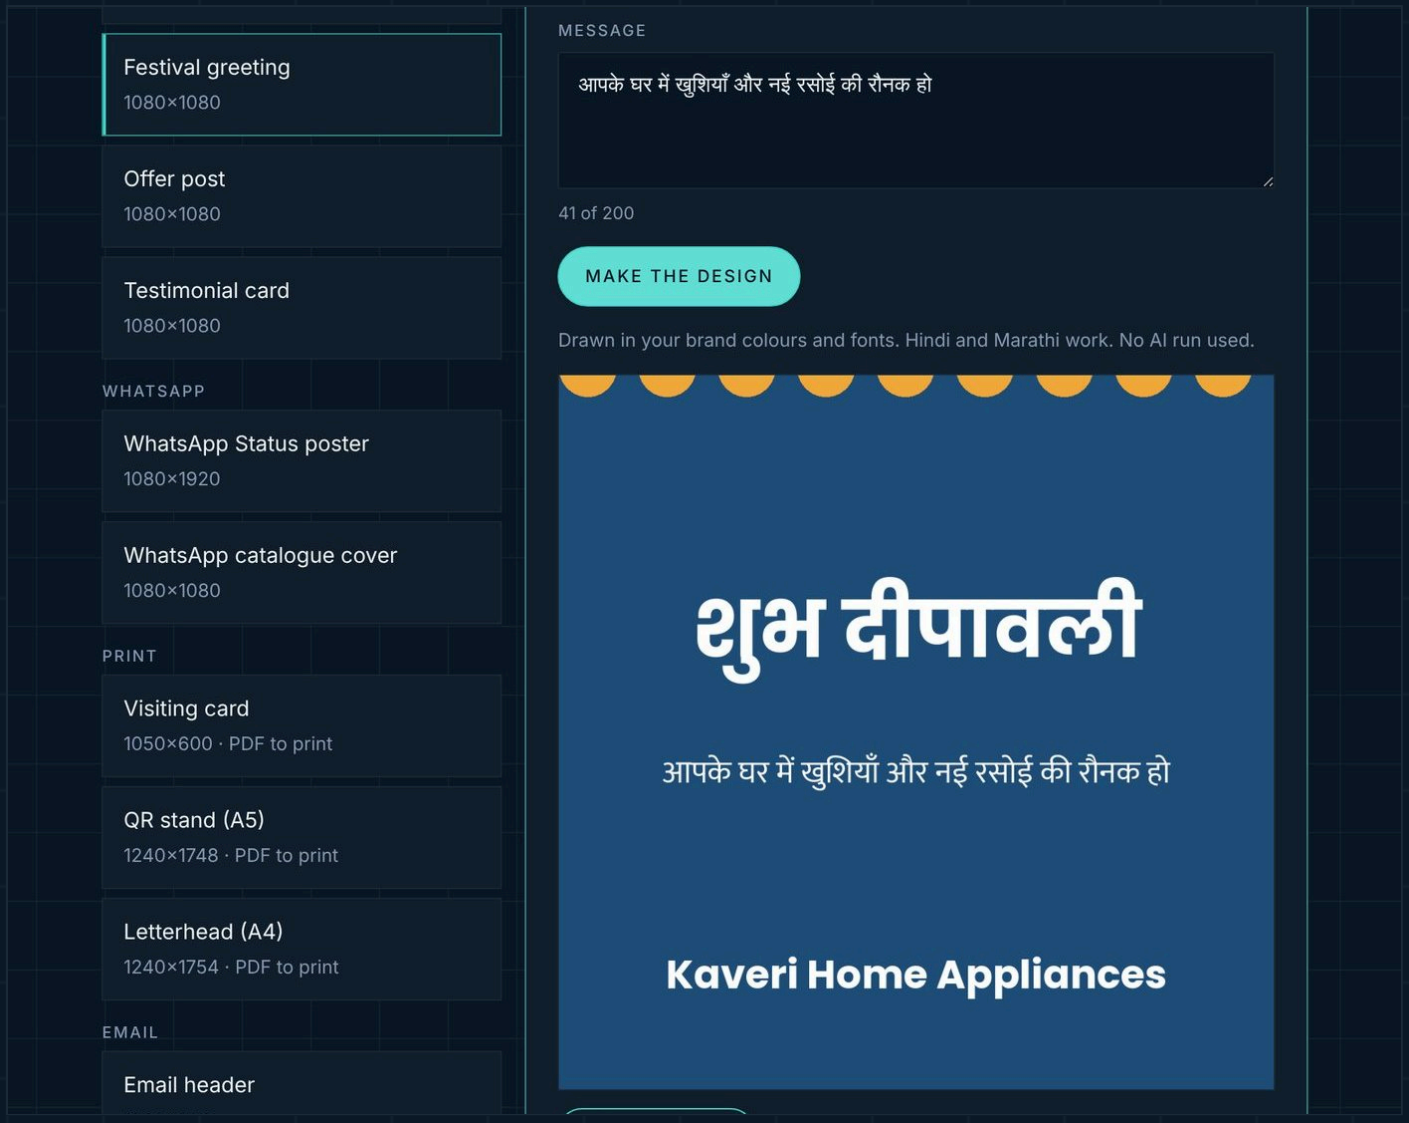

- Every AI writer in the hub follows the tone of voice.
- The main colour goes to your website, launch kit and the next invoice at once.
- When the Knowledge Hub changes, untouched lines refresh and your own lines stay.

GOOD TO KNOW

- Writing the kit uses 1 AI run; colours, fonts and designs use none.
- Only facts from the Knowledge Hub are used — no invented awards or numbers.
- Download the whole kit as a PDF.

Posts, posters and cards in your brand — Hindi too.

Eleven ready designs, drawn in your colours and fonts with your logo: social posts, a festival greeting, an offer post, a testimonial card, a WhatsApp Status poster, a catalogue cover, a visiting card, a QR stand, a letterhead and an email header.

HOW IT WORKS

1. Pick a design. The text is filled in from your brand kit; change any word.
2. Press Make the design.
3. Download the PNG, or a print-ready PDF for the visiting card, QR stand and letterhead.

SHOW IT LIVE

1. Open Festival greeting and type the greeting in Hindi.
2. Make the design and show it on screen.
3. Change the main colour in Design and make it again.

WHAT RUNS ON ITS OWN

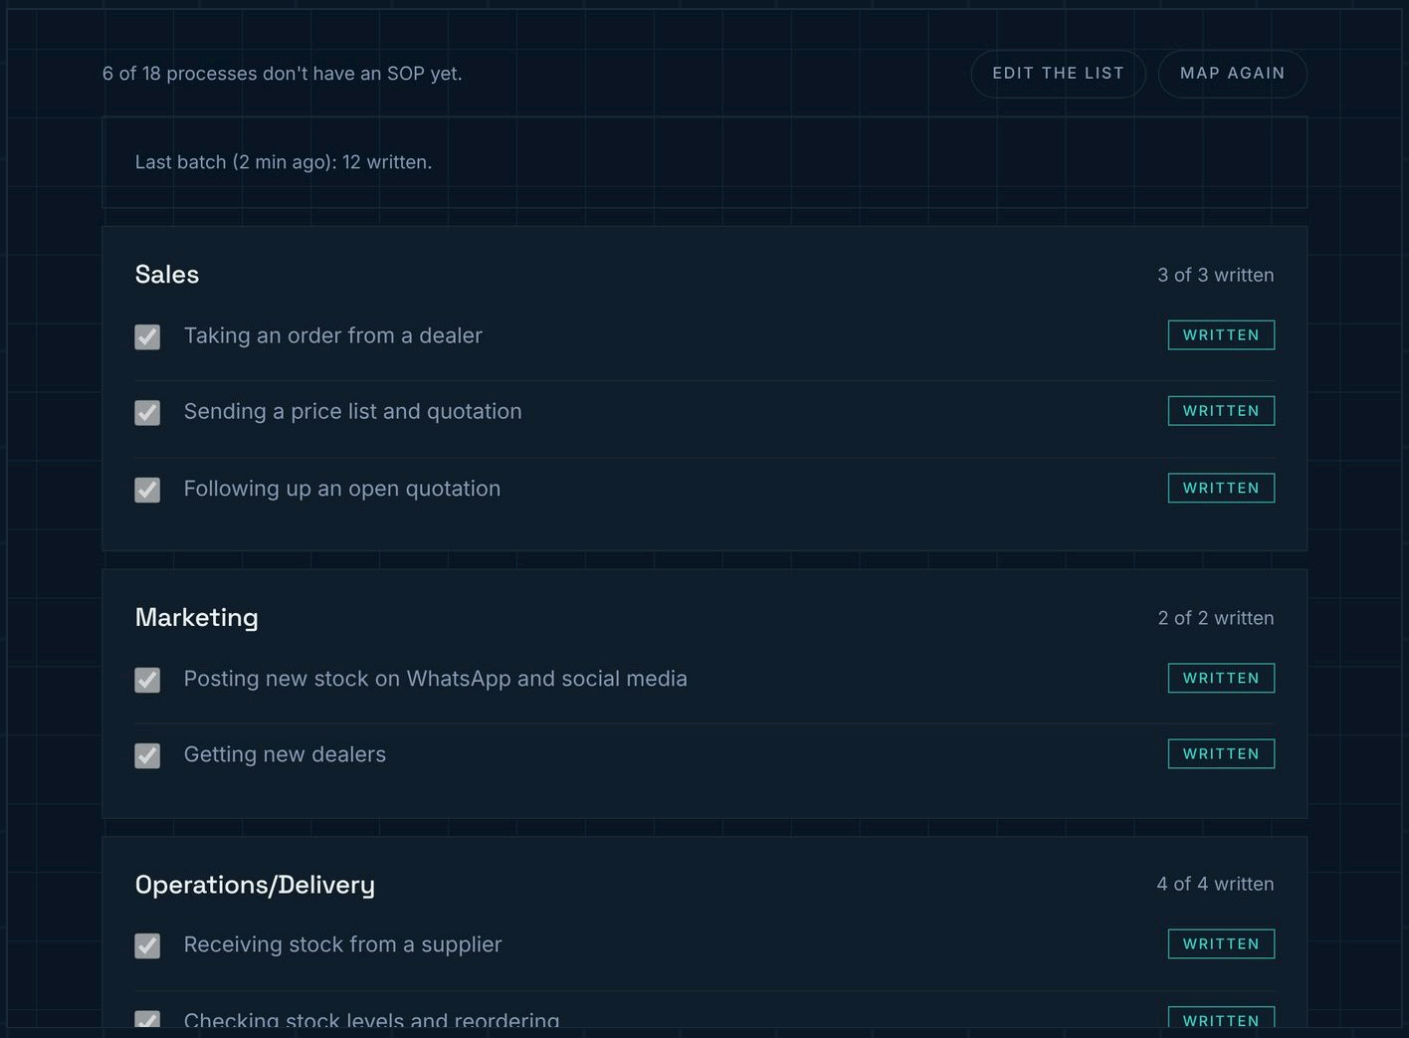

- "Make the design" on any post in the calendar opens the right template with the caption in it.

GOOD TO KNOW

- Hindi and Marathi render correctly, with fonts that support them.
- Text colour is picked for contrast against your colours.
- No AI run is used.

Every process in the business, written down.

Write one SOP for a process or a situation ("a customer says delivery is late"), or let the hub map every process in your business and write them in one go.

HOW IT WORKS

1. Map my processes: the hub lists the processes a business like yours runs, under Sales, Marketing, Operations, Accounts, HR and Customer care.
2. Tick the ones you want, edit or add your own, and see the cost before you start: 2 AI runs per SOP.
3. Each SOP has the steps, the exact words to say, what "done" looks like and when to call someone in.

WHAT RUNS ON ITS OWN

- SOPs are written in the background; progress shows as they finish.
- Every edit keeps the previous version — restore it any time.
- The Dashboard shows how many processes still have no SOP.

SHOW IT LIVE

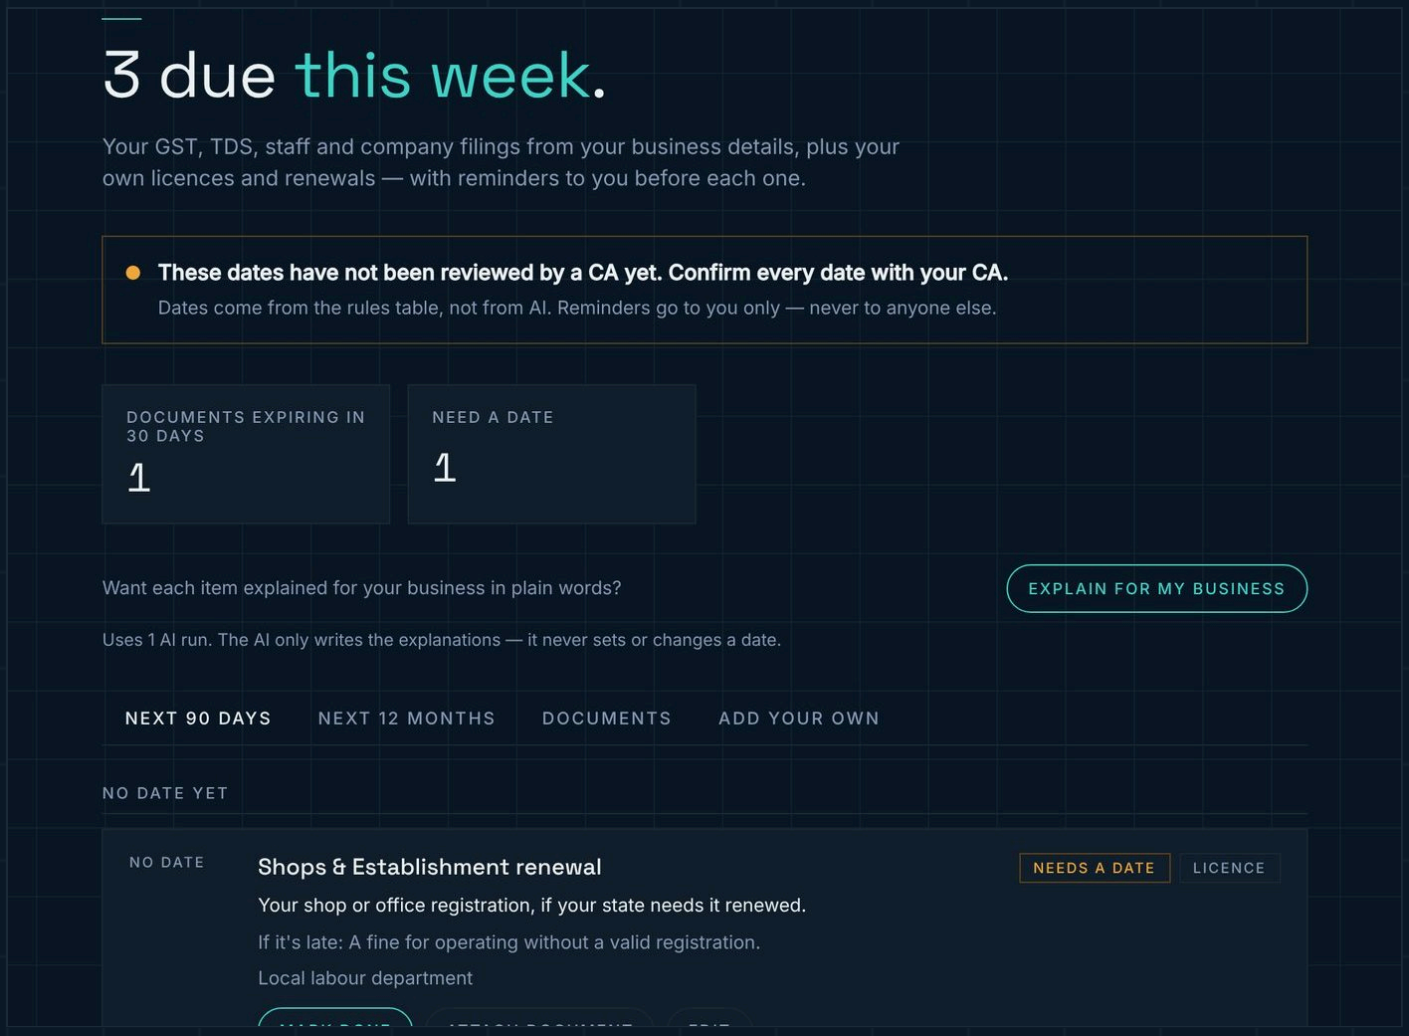

1. Map the processes for the demo business.
2. Tick 3 and press Write 3 SOPs (6 runs).
3. Open one, show the words to say, then Print / PDF.

GOOD TO KNOW

- A run that fails is given back.
- A trading business and a clinic get different process maps.
- Assign an SOP to a role; from Growth Mentorship, to a team member.

Every filing and renewal, before it's due.

From the GST number, company type, state and staff count in the Knowledge Hub, the hub builds the year's compliance calendar: GST returns, TDS, PF and ESI, professional tax, advance tax, ITR and ROC filings — plus your licences.

HOW IT WORKS

1. Fill Identity in the Knowledge Hub. The calendar appears for the next 12 months.
2. Tick the licences you hold (FSSAI, Shops & Establishment, trade licence…) and type each expiry date.
3. Mark items done, with the receipt; keep documents here and share them with your CA by a link.

SHOW IT LIVE

1. Show a proprietor without GST: a short list.
2. Change to a Pvt Ltd with GST and 25 staff: GST, TDS, PF/ESI, professional tax and ROC appear.
3. Press Explain for my business.

WHAT RUNS ON ITS OWN

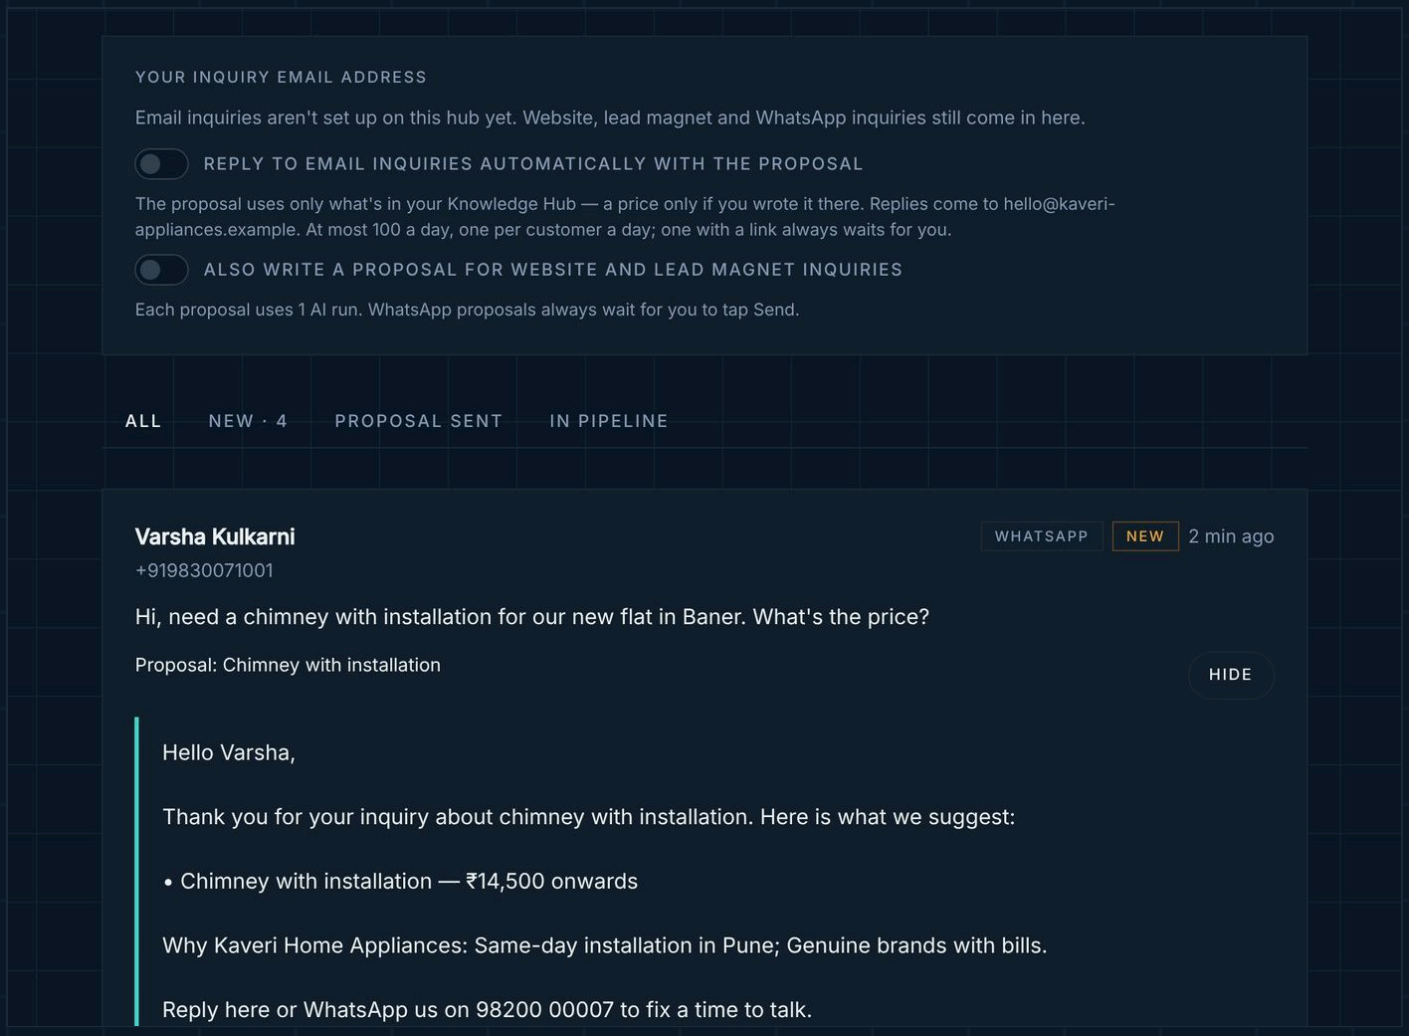

- Reminders on your WhatsApp 30, 7 and 1 days before, and on the day.
- When the government extends a date, the item moves; nothing is duplicated.
- A renewed licence asks for its next expiry date.

GOOD TO KNOW

- Dates come from a rules table, never from the AI. "Explain" writes words only (1 AI run).
- The page shows whether a CA has reviewed the dates. Always confirm with your CA.
- Reminders go to you only, never to anyone else.

Every inquiry answered with a proposal.

One inbox for every inquiry — website, lead magnet, email and WhatsApp. For each one, the hub writes a proposal from your Knowledge Hub: the matching offer, the price only if you wrote it, and one next step.

HOW IT WORKS

1. Email inquiries: publish your own inquiry address (like kaveri-home-appliances@in.employz.ai) or forward your Gmail to it.
2. WhatsApp inquiries: paste the message and number — or share it from WhatsApp on your phone into the hub.
3. Each inquiry shows New, Proposal sent or In pipeline.

WHAT RUNS ON ITS OWN

- With auto-reply switched on, email inquiries get the proposal by email; replies come to your own email.
- If nothing matches an offer, the reply asks one or two questions instead of guessing.
- WhatsApp proposals open your own WhatsApp with the text typed — one tap to send.

SHOW IT LIVE

1. Paste a WhatsApp inquiry: "Need a chimney with installation, what's the price?"
2. Read the proposal: the offer and the price from the Knowledge Hub.
3. Press Send on WhatsApp — it opens WhatsApp with the message ready.

GOOD TO KNOW

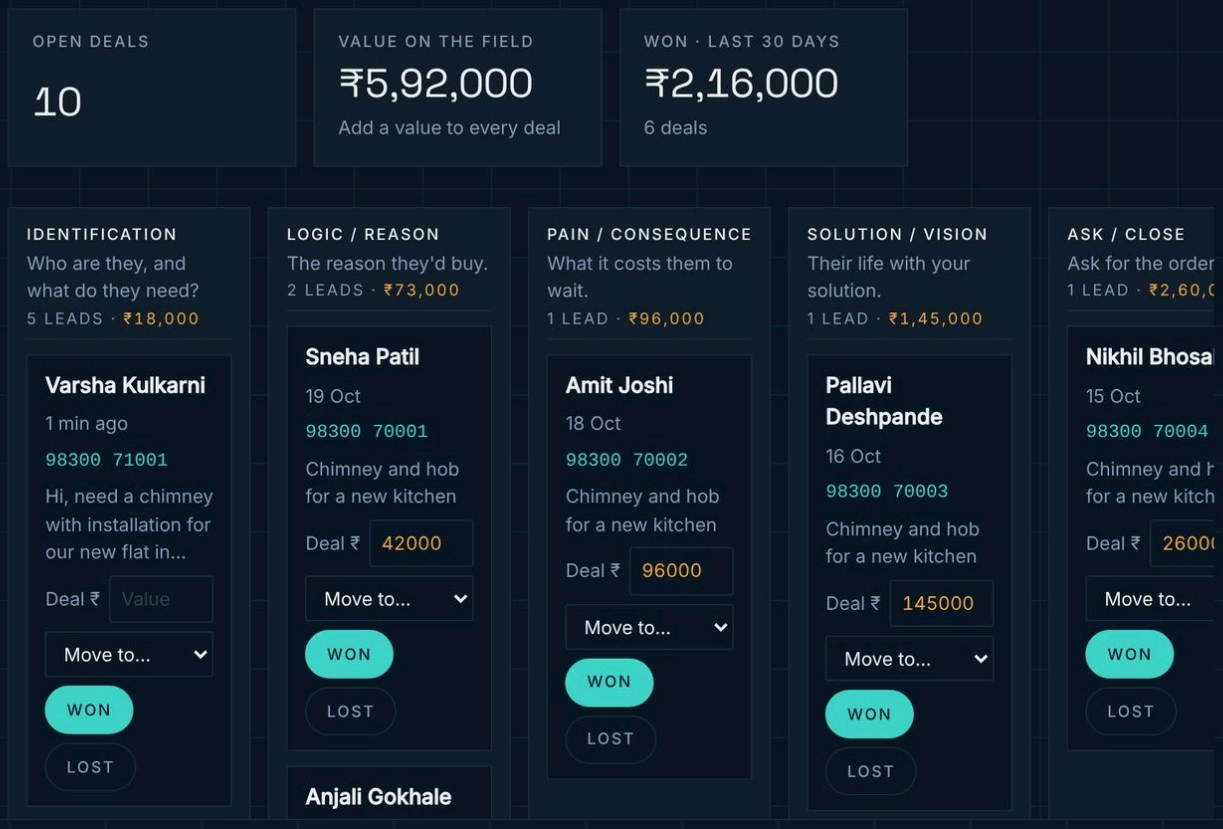

- A proposal never carries a price, discount or date that isn't in your Knowledge Hub.
- At most 100 automatic emails a day, and one per customer a day; a proposal with a link waits for you.
- Each proposal uses 1 AI run. Website inquiries get one only if you switch that on.

Know where every deal stops.

Every inquiry, from every channel, enters the pipeline at the first stage. Move deals through the five stages of a sale and see where most of them stop.

10 open deals on the field.

Every open lead on the Football Field — the 5 stages of a sale. Drag a lead to the next stage as the talk moves forward; mark it Won or Lost when it's decided.

HOW IT WORKS

1. Each lead starts at Identification.
2. Move it through Logic, Pain, Vision and Close as the conversation goes.
3. Mark it won or lost; won deals count toward your target.

WHAT RUNS ON ITS OWN

- Email, WhatsApp, lead-magnet and website leads all land here.
- With the Employz.ai CRM connected, every lead syncs there.
- The Dashboard shows open deals by stage and the stage where most deals sit.

SHOW IT LIVE

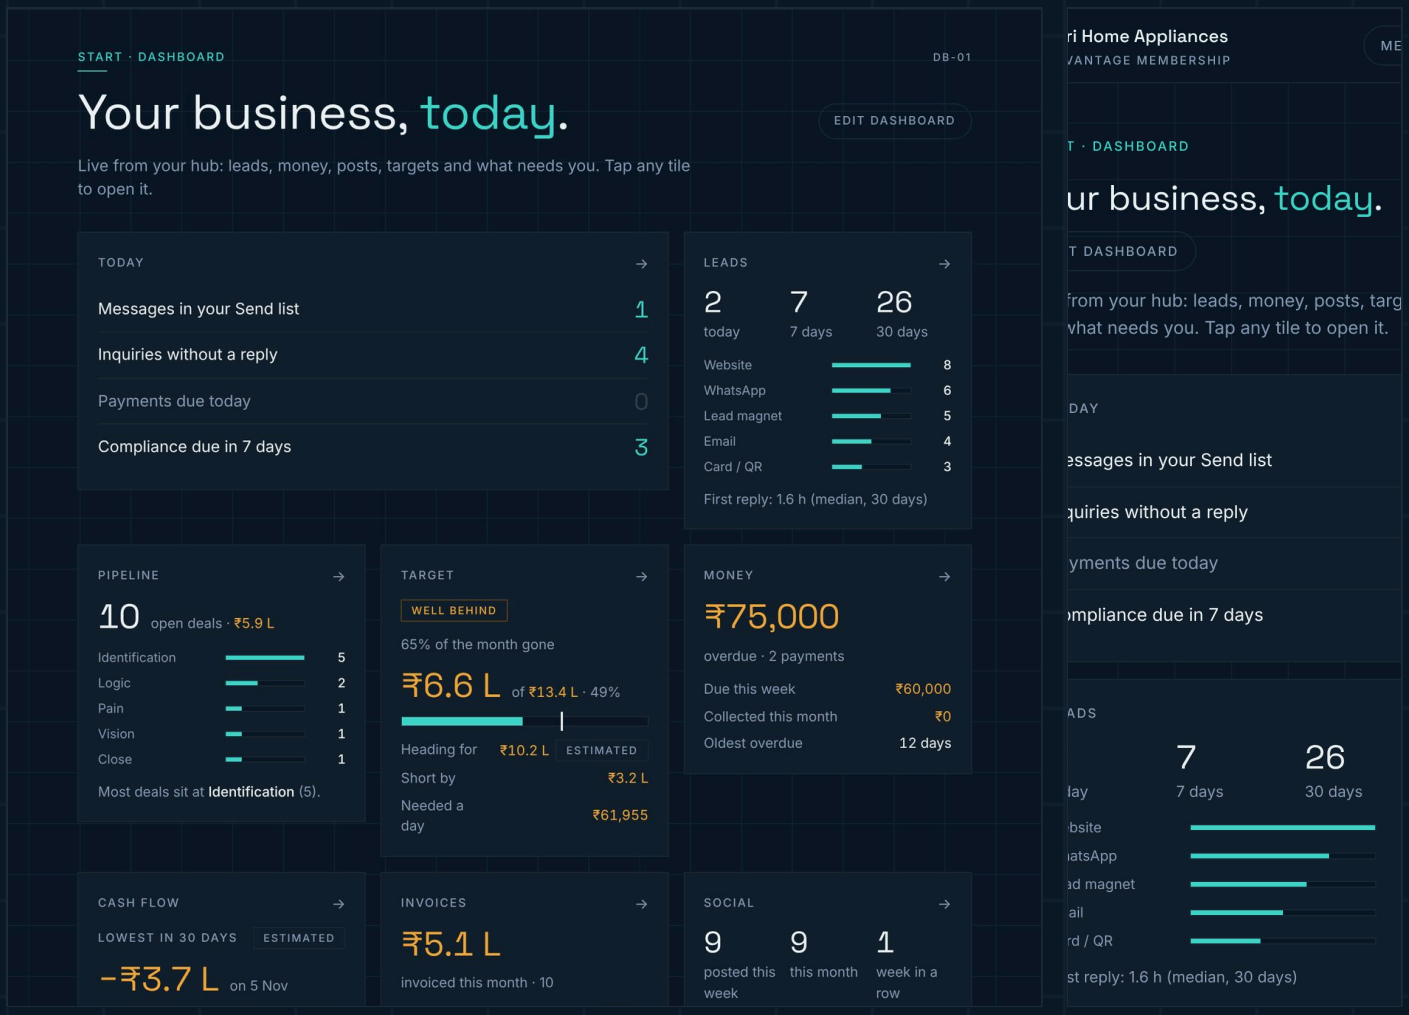

1. Open the pipeline with the open deals and their value.
2. Move a deal from Pain to Vision.
3. Mark one won and show the target move on the Dashboard.

GOOD TO KNOW

- A sale won this month counts this month, once — even if an invoice is raised later.
- Proposals, follow-ups and quotations are linked to the lead.

Your whole business on one screen.

The first screen after login. Thirteen tiles, each opening its own page: Today, Leads, Pipeline, Target, Money, Cash flow, Invoices, Social, Compliance, Website, SOPs, Knowledge Hub and AI team.

HOW IT WORKS

1. Today tells you what needs you: Send list, inquiries without a reply, payments due today, compliance due in 7 days, tasks.
2. Edit dashboard: hide tiles you don't need and put the rest in your order.
3. Tap any tile to open the page behind it.

SHOW IT LIVE

1. Log in as the demo owner: the Dashboard opens.
2. Send an inquiry from the website: Leads and Today go up.
3. Mark a due paid: Money and Cash flow change.

WHAT RUNS ON ITS OWN

- Numbers refresh every minute while the page is open.
- A new inquiry, a payment or a post shows at once.
- On a phone, Today comes first.

GOOD TO KNOW

- Features not in your plan show as a tile with what unlocks them.
- Projections and forecasts are marked "estimated".
- The old Control Room is now this Dashboard.

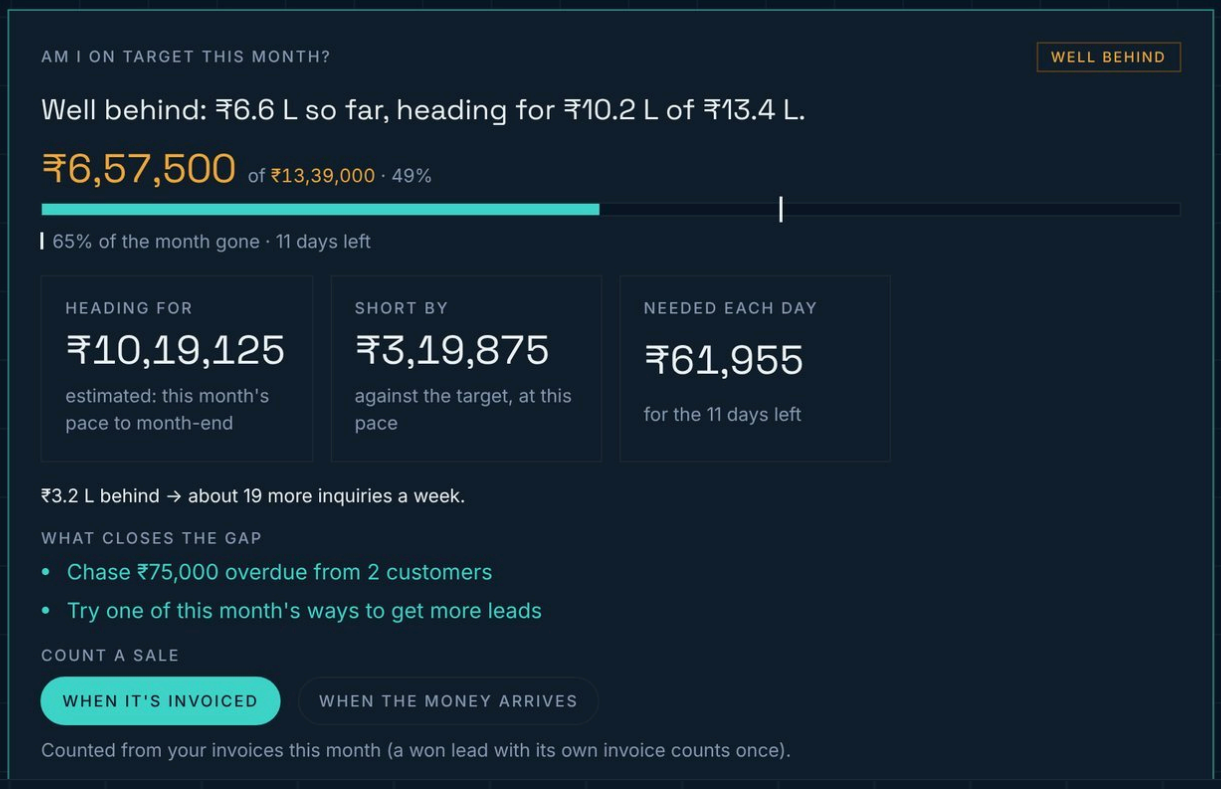

Know by the 15th if the month is behind.

Month to date against your target, from your invoices — or from payments, if you count a sale when the money comes in. The hub projects the month end and the pace you need each day.

STRUCTURE · MAGIC NUMBER MB-06

Your Magic Number.

Work back from the money you want to the inquiries you need each day.

HOW IT WORKS

1. Set the monthly target in the Knowledge Hub (or Magic Number — they're the same number).
2. Choose: count a sale when invoiced, or when paid.
3. See month to date, % of the month gone, where you're heading, the gap and the amount needed per day.

SHOW IT LIVE

1. Set a ₹10 L target.
2. Show ₹4 L invoiced by the 15th of a 30-day month: heading for ₹8 L, ₹2 L short, ₹40,000 needed a day.
3. Switch to "when paid" and see the number change.

WHAT RUNS ON ITS OWN

- On the 10th and the 20th, if the month is well behind, you get a WhatsApp with the one thing to do.
- What to do comes from your own data: follow up open quotations, chase overdue money, try a lead idea.

GOOD TO KNOW

- All maths is done by the hub, never the AI.
- An invoice for a won deal is counted once.
- Status: On track, Slightly behind (85%+) or Well behind.

See the short day before it comes.

A forecast for the next 30 days from what you've entered — your bank balance, money owed to you, fixed costs, one-off payments and compliance amounts. It is not your accounts, and it says so.

A forecast from what you've entered — not your accounts.

STARTING BALANCE	LOWEST POINT	COMING IN · 30 DAYS	GOING OUT · 30 DAYS
₹2,28,000	−₹3,67,000	₹5,16,500	₹9,03,500
Bank balance on 20 Oct + ₹48,000 marked paid since	on Thu, 5 Nov	Expected, not certain	

₹47,000 short on Mon, 26 Oct, until Wed, 18 Nov

The balance goes to −₹47,000. Collecting the dues below first closes the gap.

HOW IT WORKS

1. Type your bank balance (the Knowledge Hub keeps its date).
2. The hub lays out every day: dues on the day each customer usually pays, salaries and rent on their day, anything you add.
3. See the lowest point, the first short day, and the dues to collect first.

SHOW IT LIVE

1. Balance ₹2 L, salaries ₹3 L on the 1st, a ₹1.5 L due on the 5th.
2. Show: short ₹1 L from the 1st to the 4th — collect that due first.
3. Press What if they pay 15 days late?

WHAT RUNS ON ITS OWN

- Every morning at 8, if the balance will go short within 10 days, you get a WhatsApp with the date and the due to collect first.
- Marking a due paid moves the forecast at once.

GOOD TO KNOW

- An amount already late isn't counted as cash until it comes in.
- Add a safety buffer to be warned before zero.
- Open quotations can be counted at a % you choose — off by default.

What the hub will never do.

These rules hold on every plan and every feature in this guide.

The hub's own WhatsApp number only ever messages you.

Login codes, new-inquiry alerts, the morning digest, compliance and cash-flow alerts. Never a customer.

Below Growth Mentorship, WhatsApp to customers is tap-to-send.

The hub writes the message; you tap Send and it opens your own WhatsApp with the text typed.

Emails to customers go on their own only after you approve.

Payment follow-ups and inquiry replies run only once you've read the wording and switched them on.

The AI never invents prices, discounts or dates.

Proposals, the website, the brand kit and SOPs use only what's in your Knowledge Hub. A draft that breaks this is thrown away and the run given back.

Compliance dates never come from the AI.

They come from a rules table the admin keeps and a CA reviews.

Estimates say they are estimates.

Projections, forecasts and hours saved are marked. Cash flow says "not your accounts".

SET UP ONCE, AS AN OWNER

1. Fill the Knowledge Hub to at least 60%.
2. Add your own email in the Knowledge Hub, so customer replies reach you.
3. For automatic invoices: connect your own Razorpay in Connections (test mode first).
4. For email inquiries: forward your inquiry emails to your hub address.
5. On your phone: add the hub to your home screen, so you can share WhatsApp inquiries into it.

PLANS

Everything in this guide is part of the AI Advantage Membership (₹1,999 a month, 150 AI runs). Growth Mentorship adds AI staff, WhatsApp from your own number, the AI Telecaller and team logins.
